

ECOBAC – ULTRA LIGHT BACKING

The Regina Collection is a tufted carpet backed with high tech Ecobac which brings many benefits to consumers and retailers alike.

HIGH TECH

Ecobac uses a high tech resin which forms a stronger bond between the primary and secondary carpet backings. Despite the stronger bond the carpet is much more supple and this brings a variety of benefits.

SCRATCH FREE

When handled correctly during the fitting process Ecobac will not scratch or scuff your wallpaper or base boards.

25% LIGHTER

25% lighter than conventional action backed carpets Ecobac uses no fillers or glue. This makes it lighter on the Environment, easier to transport and easier to recycle.

EASY TO WORK WITH

Even in cold weather Ecobac will remain supple so is easier to fit and seam.

CREASE RESISTANT

Ecobac carpet can easily be folded for carrying up stairs, in elevators or other difficult to access areas with no risk of delaminating or cracking and little chance of creasing.

DELAMINATION FREE

When the primary backing and secondary backing come apart in a tufted carpet bubbles and other faults can appear. Unlike conventional glued action backed carpets Ecobac carpets will not delaminate.

100% ODORLESS

Ecobac has no smell and gives off no VOC's.
