

INDOOR/OUTDOOR RUGS

Your Fibreworks rug has been carefully fabricated and wrapped, ensuring that it arrives safely. Upon transit, the nature of synthetic fibers will cause the rug to conform to the constraints of packaging and therefore may show ripples or waves. Generally these will relax within 48 hours as the rug acclimates to the room, but could take longer in some cases. If necessary, you may need to reverse roll the rug to achieve desired shape and smooth the appearance of ripples. If the corners of the rug appear to be curling up, hand roll the corners in the opposite direction. Cold temperatures can impact fiber performance; to increase longevity, consider storing the rug indoors when not in use.

Indoor/Outdoor products have different cleaning methods than natural fibers. For cleaning your indoor/outdoor rug, mild soap or detergent and water are recommended. Before cleaning, test in a small concealed area. It may be necessary to clean and rinse the entire rug after spot cleaning to avoid spreading and staining.
