WHY SISAL TILES?

Sisal tiles are a functional option in natural fiber floor coverings. Here are several features that are unique to sisal tiles.

ANTI-STATIC

Sisal fibers help repel the buildup of dirt and debris and reduce static charge.

FASHIONABLE

Sisal tiles provide a boucle texture and show as a clean aesthetic to any setting.

EASY TO MAINTAIN

If a tile is damaged over time, simply remove that tile and replace with a new one.

SOUND ABSORBENT

The inherent acoustical properties of sisal enable them to reduce vibrations and absorb sound.

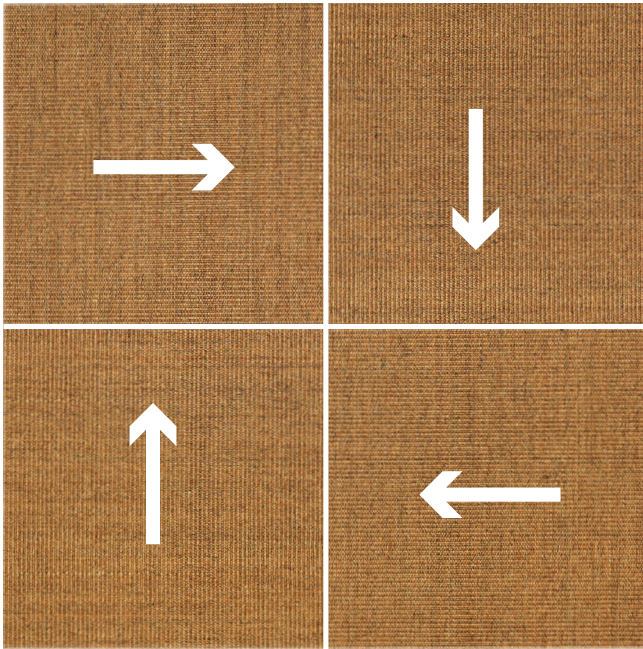

SUITABILITY

The surface of each tile is made from 100% natural sisal fibers. Sisal tiles can withstand moderate to heavy foot traffic.

INSTALLATION

Sisal tiles can be a great alternative to traditional floor coverings. Installation is easy. When installing the tiles lay each tile with a quarter turn so the ribs are going in different directions. This provides a dimensional pattern and texture. Sisal tiles can be loose laid or installed as a more permanent option with a pressure sensitive adhesive. It is recommended that tiles be given 24 hours to acclimate before installation. For more information discuss with your local flooring installer.
