

BULK PAK

Product Overview

This heavy duty collapsible bin is made from tough & durable high-density polyethylene (HDPE) which easily collapses for cost efficient transportation and storage. The bin was engineered to efficiently move, store and ship automotive, appliance and transportation equipment components.

The bin is designed to optimise your supply chain while providing key features and benefits such as access door and bottom configurations as well as enhanced repair ability features for easy on-site repair. With weight capacities from 1,500 to 2,000 pounds, they are ideal for all types of product loads.

A key design feature allows forklift access from all sides and rounded legs for easy forklift and hand truck entry. The bin can be stacked 3 high when full and can be stacked 7 to a pallet when collapsed. It allows for multiple door configuration and has a centre leg for increased load capacity. Another design feature is the ventilated reinforced base allowing for improved durability.

Manufactured and designed to withstand high impact resistance guarding against forklift or truck damage. Specially located areas on all four sides provide the ability to place card holders, ID plates, place cards or moulded logos.

APHD BULK PAK & APHD LID

✓	Material: High-Density Polyethylene (HDPE)
✓	Extremely tough and durable
✓	Used widely in the mining industry, closed loop freight of goods, heavy storage/transit or transporting produce
✓	Made of NON-FOOD grade material
✓	Made in USA

FEATURES AND BENEFITS
