

Installation Guide

Choose the place

Hold up where you'd like your sign to go. Using a pencil, mark the wall evenly.

Drill the holes

Secure the included metal standoffs to your sign. Make the necessary pilot holes with your drill.

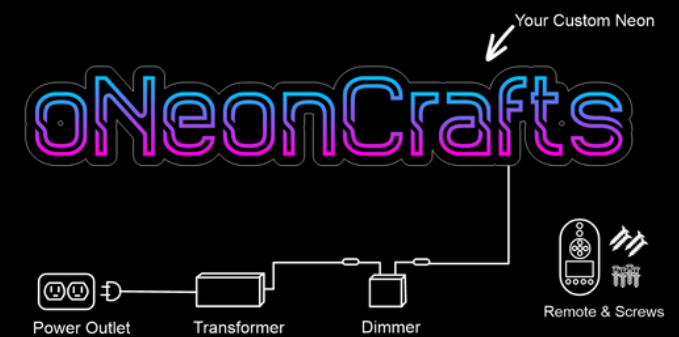

Use the screwdriver

Use a screwdriver to drill the screws into the holes naturally found inside the barrel of each individual standoff, ensuring all are flush with the walls.

Position the neon sign

Secure the sign hardware to the front place of the plexi by gently tightening the inner screws by hand.

Plug the cord

Plug the cord into a grounded wall outlet. Check to make sure the neon tubes light up.
