9-D Red Dry Powder

#9-D

- Free Flowing: Improved particle mobility and less background
- Sharp Red: Good contrast against natural metal color
- Detects discontinuities in welds, forgings and castings

ZChek-9-D is a red colored free flowing powder used in dry method magnetic particle inspection. This inspection is performed under normal visible light which makes the color of the powder very clear. This product is formulated with selected particle sizes and shapes to locate surface and near surface discontinuities in ferrous materials. **Sold as an individual 10lb tub.**

Directions for use: Spray gently on the part surface while magnetizing by using the puffer tubs.

It is manufactured as per ASTM, ISO, AMS, ASME standards.
