

## Alutest BB

#A-BB

- Different Configurations
  - Pass Through
  - Gantry
- Probe Type:
  - UT
  - EC
- Imperfections Sensitivity:
  - Internal: FBH 0.4\*
  - External: 0.2 mm - 10 mm

The Alutest-BB systems are designed for automatic ultrasonic testing of bars and billets made of aluminum, titanium, copper, and other non-ferrous metals. Like the Nordiscan-BB series, this system can be delivered in two different configurations.

This system can be supplemented with additional peripheral systems that provide automatic measurement of conductivity, analysis of metallurgical structure, and high-precision measurement of geometric dimensions of control objects, as well as marking, sorting, and packaging.

Meets all industry standards.
