Apollo LED Film Viewers

#A-258 #A-412 #A-4517

- High power SMD LED's
- Built in writing lamp (A-412 & A-4517)
- Adjustable viewing screen shutters
- Electronic brightness control & foot switch control
- Corrosion resistant AL body

The Apollo LED Film Viewers are designed and manufactured for X-ray film evaluation. A durable economically designed structure made of corrosion resistant aluminum body contains the latest series of power LED's giving magnificent white light over the whole control range.

The higher contrast helps inspection personnel to find defects and discontinuities easily without causing eye strain. A speed controlled cooling fan reduces noise and a large variety of accessories makes handling films very simple. High illuminance makes it possible to view very dark films by not damaging the quality of the film.

It is manufactured as per ASTM E1390 standards.
