F-18W Powder

#F-18W

- High Sensitivity: Detects very fine defects
- Detects Discontinuities
- Fluorescent Yellow Green: Excellent indication
- Low Background: Enhances inspection reliability

ZChek-F-18W Is the blend of fluorescent F18 powder along with WA wetting agent which is easily mixed with water. The anti-corrosion agents in WA prevent flash rusting of the components allowing water based wet method inspection. Recommended to use with ZChek 801 cart oil or a suitable water conditioner, such as WA-9. **Sold as an individual 5lb tub.**

Directions for use: Add at 10-11 grams per liter. Run the pump for at least 15 minutes before testing. Check concentration before use each shift using a centrifuge tube. Parts should be clean and dry before testing. The bath must be under continuous agitation. The bath is applied to all surfaces of the part. The instant the bath stream is removed, the magnetizing current is applied.

It is manufactured as per ASTM, ISO, AMS, ASME standards.
