

EQUIPCON

Permanent Yoke

#E-M5

- Durable, lightweight & compact
- No power required
- Completely Portable
- Hinged frame and cable type
- Suitable for Dry & Wet applications

Equipcon offers 2 models in the M5-Series: Fixed Type M5-F and Wire Type M5-W. The yokes are equipped with 360° rotating contact feet which easily permits the operator to maximize the contact area between the pole piece and the workpiece.

These yoke magnets are ideal for effective magnetization of components for crack detection, particularly where the use of electromagnetic yokes is impracticable or prohibited for safety reasons. The permanent magnet yokes offer complete portability due to no requirement of electricity.

All Yokes are manufactured as per ASTM E1444 and E709 standards.
