

EQUIPCON

# Pie Gauge

#E-Pie

- Copper Plated: Corrosion resistance and durability
- Eight Linear Discontinuities
- Covers all directions containing magnetic flux
- Non-Ferrous Handle
- Easy to Use

The Equipcon Pie Gauge is a disk of highly permeable material divided into eight sections by non-ferromagnetic material. The joining of sections act as artificial defects that radiate out in different directions from the center which allows the inspector to ensure magnetic fields are properly oriented for the inspection at hand.

The sections are furnace brazed and copper plated. The advantage of the pie gauge is that it is easy to use, and it can be used indefinitely without deterioration.

It is manufactured as per ASTM E1444 & E709 standards.
