# ***RAM-TEST-SEMI Inspection System***

The **RAM-TEST-SEMI** is a resonant inspection system that's ideal for integration into an existing manufacturing process.

This system offers seamless integration and effortless automation, enabling repeatable impacts using an industrial impactor. Its flexibility allows different types of parts to be processed on the same production line, making it a versatile and efficient solution for various manufacturing needs.

The system includes all of NDT-RAM's core components, including a digital controller, impactor, microphone, software, and industrial PC, offering direct interfacing with programmable logic controllers to integrate into existing quality inspection systems.
