

Installation: Z.C.I. for SawStop Jobsite Table Saw

Congratulations! You have made the right choice in upgrades for your SawStop brand Jobsite Table Saw (model JSS). This Zero Clearance Insert (Z.C.I.) system will allow you to make cleaner, safer cuts in any material you run through your table saw by eliminating tear-out and preventing fall-off from becoming wedged between your throat plate and your saw blade. Just follow these simple instructions to install your new Z.C.I.

1. Remove the original throat plate that came with your SawStop Jobsite Table Saw.
2. Remove the saw's riving knife.
 - a. You'll be able to reinstall this later after you've made your first cut.
3. Remove the black phenolic insert from your new red aluminum throat plate.
4. Install the red aluminum throat plate into the table saw as you would the original by inserting the back end into the saw's T-bolts and then placing the front end down to latch it into place.
5. Level the red throat plate with the pre-installed leveling screws so that the plate is flush with the tabletop.
6. Once the red throat plate has been leveled, remove it from the saw and re-install the black phenolic insert. Install the red plate and black insert back into the table top.
7. Position your saw's fence over the right side of the plate in preparation for the first cut.
 - a. Use caution and **do not place the fence where it may be cut by your saw blade.**
8. Use your SawStop's pre-cut check function to ensure that the brake is not being tripped by anything, and put on your safety glasses.
9. Turn on your saw and make your first cut into the black phenolic insert.
 - a. Raise the blade slowly to avoid bending the plate during the cut.
 - b. Raise the saw blade until it meets with the pre-cut slot at the back.
10. Turn off your saw, allow the blade to stop spinning, remove the red throat plate, and reinstall the riving knife.

Now your SawStop Jobsite Table Saw is ready to make the finest cuts you've seen yet. When you're ready change to a different blade, just change out the black phenolic insert for a fresh one and repeat steps 7 through 10.

If you have any difficulty please feel free to contact Infinity Cutting Tools Customer Service Department Monday through Friday, 9:00 a.m. to 5:00 p.m. EST at (813) 881-9090.
