

# AXM Remote

The AXM Remote is a rugged LED display that integrates with the Airtec AXM system.

The unit is comprised of a machined and anodised aluminium body with a tough polycarbonate face plate. The display is the same super bright LED used in our AXM / AXL gauges and can be seen day or night, from several meters away.

The remote is easily mounted inside the cab or to a suitable vantage point on the outside of the cab or chassis. Axle weights for each group and GVM can be read simply via a quick press of the Piezo switch on the front of the unit.
