

# MATT'S CHAT

*"Death leaves a heartache no one can heal; love leaves a memory no one can steal."*  
— Richard Puz

In the short space of a month we lost Cat (Millin's Superstar) to cancer and on ANZAC Day my Pop was taken too early. I remember my Dad for many things; his friendship, his leadership, the values he instilled in me – but he was also an amazing prankster. On one occasion, Dad was getting some concrete laid by a contractor at home, and on the same day was involved in a minor car crash. The driver of the other car was an IRD tax investigator, and Dad took his business card. When the concrete job was finished at home, my Dad asked the contractor if there was a discount for cash... there was. At this point Dad pulled out the cash and the IRD business card and handed both over... the contractor's reaction was priceless! All we are left with is memories, make as many as you can.

## ISOLATION AND CONTAINMENT OF DUST AND SPRAY PAINTING OVERSPRAY

Whether you're a novice or a seasoned pro, job is small or large – one of the most important aspects of any spray painting work is isolation and containment of spray painting work areas.

### Why the need for isolation and containment?

If your work area isn't properly and effectively isolated, you risk releasing solvents and toxins into the air and causing harm to yourself, other workers or clients.

#### » Isolate:

Where possible, create a fully self-contained space, ZipWall Systems provides a portable, temporary, easy solution. Utilising plastic sheeting and a quick-fix pole system, you can isolate an area in a matter of minutes.

If you're just isolating one room, Temporary Renovator Doors are ideal, as they eliminate the risk of drifting dust ruining your shiny new paint job.

#### » Ventilate:

Be sure to provide for sufficient ventilation and air flow. Portable Ventilation Fans can be used to bring in clean air or reversed to remove the contaminated air.

Combine the fans with Portable Overspray Filter Boxes, and you can successfully remove overspray and minimise odours.

### MATT'S PRODUCT REVIEW OF THE MONTH

#### Rolite Brass and Copper Polish

Cleans, Shines and Protects.

Produces a brilliant shine on all brass and copper surfaces in one easy quick step. Ideal to protect against rust, tarnish, water stains and salt and fresh water corrosion.

#### » Reduce:

If you're using an airless sprayer, consider Graco FFLP or Wagner HEA tips, as both are low-pressure options that create much less overspray. If you're doing smaller areas like kitchen cabinetry, then consider using an HVLP System, as they are particularly helpful.
