

How to Easily Light Binchotan Briquettes Using a Chimney Starter

1. Arrange a few firelighters together, we like using these all natural fibre ones

2. Check the chimney fits over your firelighters easily

3. Carefully light the firelighters, load the binchotan into the chimney and place over the lit firelighters

4. Allow time for the binchotan to heat up

NOTE: If using non-hollow binchotan, light some normal charcoal in the chimney first, then when hot, tip this out, fill chimney with the binchotan and place the chimney over the lit charcoal

5. Once your binchotan is white, it is ready to be carefully poured from the chimney into your Konro Grill
