## HOW TO INSTALL YOUR BOTTLE OPENER
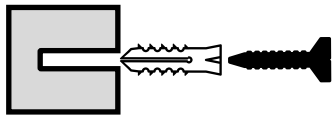

1 Measure the distance between keyholes on back of the bottle opener.

**2** Using a level and a pencil draw a line on the wall. Make two small dots on the line; space them apart using the measurement taken in Step 1.

1/8"

3 Drill screws into the marked dots. Leave the screws about 1/8" protruding from the wall. Drill at least one scew into a stud.

***OPTIONAL** If you are unable to locate a stud, use the provided wall anchors. Pre-drill a hole that is slightly smaller than the anchor. Use a hammer to gently tap anchor into hole. Drill the screw into the anchor leaving about 1/8" protruding from the wall.*

4 Fit keyholes onto screws and push down to secure the bottle opener to the wall. Enjoy!
