Analysis	Level Found	Reporting			Analyst- Date	Verified- Date
	As Received	Units	Limit	Method		

This report was reissued on 2023-01-16 09:03:46 by lkd8 for the following reason:
updated serving size per client.

All results are reported on an AS RECEIVED basis., n.d. = not detected , ppm = parts per million, ppm = mg/kg

For questions please contact:

Cole C Parsons
Account Manager

Detailed Method Description(s)**Chloride by Soil Sci. & Plant Anal. 1970**

Sample analysis follows MWL WC 054 which is based on a method published in the 1970 volume of Soil Science and Plant Analysis pp 1-6. The sample is extracted with dilute sodium hydroxide and a silver nitrate solution is used to titrate the extract to a potentiometric end point.

ME 042

Analysis follows MWL ME 042 which is based on USP 233 and EPA 6010b, Inductively Coupled Plasma (ICP), previously reported as ICAP.

A light emission technique where prepared samples are injected into a high energy plasma that forces the elements in the injected sample to emit light wavelengths that are specific to each metal present. The intensities of which are proportional to the level of minerals and metals present. The light is then detected and correlated to the levels of minerals and metals in the original sample.

ASTM D 4052 density or specific gravity

A small volume of liquid sample is introduced into an oscillating sample tube and the change in oscillation frequency caused by the change in mass is used to determine the density, relative density, or API gravity of the sample.

ME 080

Sample preparation for metals analysis referenced by <USP 233> follows MWL ME 080 which is a microwave assisted wet-ash digest or a "neat" dilution.

The result(s) issued on this report only reflect the analysis of the sample(s) submitted.
