Detailed Method Description(s)

ME 027

Analysis follows MWL ME 027 which is based on AOAC 2011.14. Samples have been prepared by MWL ME 077 using a wet ash process. Sample analysis involves moving the sample extract into the ICP where it is nebulized and introduced into the high temperature plasma which energizes the electrons of the dissolved minerals/metals. As the energized electrons of the minerals/metals return to ground state, energy is released as light. The emitted wavelength(s) and light intensities are used to identify and quantitate the minerals/metals in the sample

The result(s) issued on this report only reflect the analysis of the sample(s) submitted.
