- **Hold down Power button until "Standby" is displayed and then release power button to engage sleep mode. Short press power button to wake up unit.**
- **Hold down Power button until timer counts down from 3 to 0 to fully power down the unit.**

HELPFUL HINTS

- Thermal does not work through glass (will show only reflection).
- Thermal does not work through glass. The glass will reflect the thermal image.
- Make sure to use an object with a heat signature or reflectivity when sighting in the device. (do not list this for our thermal monoculars)
- Always make sure to turn the device completely off when not in use.
- Completely power down the device before removing or changing out the battery.
- When cleaning the thermal sensor, do not scrub with chemical solvents. Scrubbing the lens frequently may damage the coating of the lens and avoid touching the surface of the lens as acid materials on skin can damage the coating.
