

## REASONS FOR CHOOSING SKETCHPAINT FROM MAGPAINT:

- ↳ Harmless to humans and the environment: contains no solvents and is virtually odourless.
- ↳ A water-based paint, which allow easy and safe use in every (professional) environment.
- ↳ After the paint has hardened, not only can the surface be written on, but it is also easily washable.
- ↳ Can easily turn any surface into a whiteboard.
- ↳ Available in four versions: white, transparent, matt white and matt transparent.
- ↳ May easily be applied as a top coat to Magnet Paint from MagPaint.
- ↳ Certified according to strict European legislation.

MAKE YOUR OWN WHITEBOARD

## SKETCHPAINT SHORT, BUT SWEET

SKETCHPAINT transforms any smooth surface into a surface you can write on with whiteboard markers.

Create a whiteboard on stone, wood, hard plastic or metal? No problem! SKETCHPAINT is also suitable for walls, doors, tables and cupboards.

### TP:

Use liquid chalk markers on transparent SKETCHPAINT when a dark background has been applied. Be amazed by the vibrant colours!

# SKETCHPAINT

SKETCH PAINT FROM MAGPAINT:  
PAINT WITH IMAGINATION!

SKETCHPAINT lets your imagination come to life. At home, in play areas, in the office, in shops, at school and in community areas. Come up with your own ideas!

### AT HOME

You can draw and write wherever you like. SKETCHPAINT lets you do it. Magically turn that boring wall into a whiteboard. Be creative in the kids' room or give the old kitchen table a lick of paint. It's not only convenient, it's also great fun!

### IN THE WORK PLACE

Give your mind free rein... about your work as well. Get rid of those traditional whiteboards! You can use the whole wall, and let everyone join in. Increase your work efficiency further? SKETCHPAINT can be applied as a top coat for MagnetPaint to give increased functionality for more overview, planning, creativity and participation.

### AT SCHOOL

Kids love drawing and writing and, of course, they prefer to write on the wall itself! With SKETCHPAINT, you can playfully introduce schoolchildren to spelling, creativity and cooperation. Use MagnetPaint as an undercoat, so that as well as the whiteboard, children can also use magnets and magnetic games.

### APPLICATION

Make sure the surface is as smooth as possible; any uneven surfaces make it harder to sketch and clean, so don't be afraid to slightly sand the area before you apply the paint. Ensure you clean the area to be painted with a dry cloth to avoid any dust or foreign objects being rolled into the paint.

Separate the small tin from the large tin. Empty the contents from the small tin into the large tin. Mix thoroughly. After stirring leave the paint to stand for five minutes until most of the air bubbles have disappeared. Apply the paint within one hour of mixing as the paint does cure quickly. Before removing any masking tape score around the edges using a craft knife. For best results, apply the paint with a short nap roller.

SKETCHPAINT from MagPaint is available in 0.5L and 1.0L tins. Available in white, transparent, and matt white and matt transparent versions.
