

The MDX trucks shred confidential waste paper to the highest security levels with the smallest shred size available within the market.

In ultra-high security mode, the machine meets the requirements of EN15713 security level 6, suitable for confidential and top-secret data that, if disclosed, could have severe consequences.

2mm Strips

The cross-cut action reduces paper to 2mm strips or pieces with a maximum surface area of 320mm2.

In standard high-security mode, the machines meet EN15713 security level 3, suitable for most sensitive or confidential information.

Certificate of Destruction

A Certificate of Destruction and Waste Transfer Note are issued for each service, confirming the safe destruction of your data in compliance with the Data Protection Act.

The shredders themselves are mounted on our purpose-built MDX-1 lorries, which are considered to be the most secure vehicles in the world and are approved by both CPNI and the Ministry of Defence.
