

POWERPULL INSTRUCTIONS

Thank you for investing in the ProMAXX® PowerPull™ series fuel injector removal tool for select Ford® and Mazda® engines!

The device was engineered to speed the removal and reduce damage to the injectors plastic housing. The device is precision machined from anodized aluminum to encase the injector and to handle more pulling power while reducing damage compared to other pullers.

To use, drop the device alongside the injector and slide it over the o-ring and under the plastic flange portion of the injector. Grasp the injector tool by hand and lift it free. For more difficult injectors, consider the optional ProHammer™ shown at right. Simply thread the ProHammer into the top of the injector removal tool and use quick action to remove it.

OPTIONAL PowerHammer™ Kit (Consists of Hammer, Slide, Chrome Acorn Nut, & Impact Washer.

Compatible with:

<u>Ford</u>	<u>Lincoln</u>	<u>Mazda</u>	<u>Mercury</u>
