Discover a new dimension

The Activator is a new kind of Braille display concept: it extends the proven features of our Braille displays - such as the concave Braille cells and the patented ATC technology for automatic switching - with forward-looking innovations from unprecedented hardware and software solutions in a modern design. Combining the potential of the iPhone, the Activator offers a next-generation Braille experience.

| Foldable 2-in-1 keyboard | SmartDock with USB port | Braille Grade 2 Translator | iOS-App HelpTech+ |

Two keyboards - in one

A special highlight of the Activator is the patent-pending multifunctional folding keyboard with Braille input. With just one flick of the wrist, the ergonomically designed Braille keyboard becomes a fully-fledged computer keyboard with tactile switching characteristics. The Activator offers the perfect input mode for every application. Whether Braille or text input. Perfect for school, university or work.

The folding keyboard is made of high-quality aluminum, is impressively flat with a height of only 8 millimeters and sets new standards in design.

The smart Braille display

The SmartDock, which can be magnetically connected to the Activator, creates a groundbreaking symbiosis of Braille display and iPhone that offers completely new possibilities. With the SmartDock, the Activator becomes a mobile workstation in no time at all.

Many possibilities thanks to USB
The SmartDock has a USB port on the top. With this, you can open and edit files from a USB stick via the iPhone. Many of the common file formats are already supported by the iPhone. And for all other file formats, you only need the appropriate app from the App Store. You can also connect other devices such as headphones, microphones or SD card readers to the iPhone via the USB port.

Shared charging
If the Activator is connected to a power adaptor, the iPhone connected to the SmartDock also charges automatically.
You only need to take one charger with you.

### Integrated translation for contracted Braille

The translation and back-translation of Braille Grade 1 into contracted Braille (Grade 2) is directly integrated into the Activator. RTFC is the world's leading translation tool for English, German and French. The Activator also effortlessly handles translation and back-translation into Unified English Braille (UEB).

Launch iOS apps directly

The Activator makes it easier than ever to open your favourite apps on your iPhone. You can customize the Activator's internal menu and add your own app favorites.

SmartServices

The connection with the iPhone expands the internal functions of the Activator by SmartServices. The first feature is a news feed service, optimized for the use with Braille displays, which you can put together according to your personal interests.

The perfect complement: iOS-App HelpTech+

The iOS-App HelpTech+, available free of charge for your iPhone, adds many new features to the Activator, making it a next-generation Braille experience once and for all. We are continuously developing HelpTech+. Additional new functions are provided via the App Store. As a result, we will continue to offer you a first-class experience in the future.

Braille monitor
The integrated Braille monitor allows a sighted person to follow the information output on the Braille display directly on the iPhone screen. Including the indication of the reading position, marked text and the cursor position.

Dictation function
With the speech input you can easily dictate texts instead of typing them yourself. The recognized text is then either saved in a new file on the Activator or inserted into an existing file at the desired position.

Voice output
The speech output function allows you to have texts on the Activator read aloud through the iPhone's speakers.

File manager
With HelpTech+ you can copy files back and forth between the Activator and your iPhone.

Send texts
Send texts from the iPhone clipboard directly to the Activator.

It is our pleasure to consult you

Together with our international partner we are there for you.
