PIAF
touching is believing

 **HARPO**
...we help the world to see.

P.i.a.f Tactile Image Maker High Quality Tactile Graphics in a Flash

Can a picture be touched? Can touch see a picture. Images and graphics help understand what is difficult to be described by words. Images rise and are ready in an instant. Draw, print or copy pictures onto the Piaf swell paper and pass it through the Piaf and all the black lines and shapes swell to create a drawing that can be read with the fingers.

Use it for education, employment, or fun.

In early education Piaf can be used to introduce simple shapes and basic concepts; the concept of drawing; the first steps towards graphical expression; and illustrate handwriting and signatures. Later, Piaf can provide graphical information in specialist areas such as Mathematics and the Sciences.

Piaf can produce high quality local area maps for orientation and mobility training, or make campus or building maps for new students or employees.

In the workplace Piaf can show the layout of software on a screen, or graphics such as organisational structure or sales charts.
