SONICCLOUD
EXPERIENCE THE POWER OF PERSONALIZED SOUND

SONICCLOUD

SonicCloud empowers your team to hear clearly.

SonicCloud empowers everyone with mild to severe hearing loss to hear speech with clarity while maintaining a completely natural sound quality.

Our enterprise software **personalizes** the sound on your computer to help you conquer your workday like a boss, without limitation.

- Video conferencing (Teams, Zoom, Lifesize, Poly, Etc)
- VoIP telephone calls
- Webinars
- Video / music streaming
- And more.

SonicCloud's new enterprise software works seamlessly in conjunction with videoconferencing and VoIP applications. SonicCloud recognizes that voices and dialogue can come out muddy, muffled and distant on conference calls – even if you are using today's very best headsets. SonicCloud gives users an extra boost in richness, clarity and customization to quickly and seamlessly increase speech understanding.

SonicCloud's simplified version of the product includes new "Sample Profiles" which can be quickly selected based on the user's hearing ability -- whether they have "normal' hearing , or mild to profound hearing loss -- and used as a starting point to immediately enhance all the audio on the user's computer.

For those who desire more precise customization, the SonicCloud Hearing Test can be downloaded on iPhone or Android, and the resultant hearing profile will automatically appear in the desktop/laptop application, tailored to the user's hearing fingerprint!

SonicCloud is here to ensure that employee and team remote communication is as easy, efficient, and accessible as possible.
