

# S-MASH ▶

S-MASH is the first biomechanical sock designed for Padel and Tennis. Thanks to its biomechanical applications and localized compression work, this sock guarantees stability to the foot during sports activities and changes of direction. It prevents the occurrence of injuries and inflammation due to jumping, sudden movements, rapid jerks and speeds up after-training and after-match recovery.

PRINT SYSTEM  
GRIP

### 1. + STABILITY + PROTECTION

The special anti-slip design of the screen printed back stabilises the foot in contact with the shoe, thus creating a unique body, optimizing movements and conveying maximum stability to the athlete.

PRINT SYSTEM  
GRIP

### 2. + GRIP

S-MASH is equipped with an innovative anti-slip system under the foot that extends to the big toe, where thrust and acceleration are generated. In this way, the athlete is guaranteed maximum stability even during sudden changes of direction, jumps and backward runs.

METATARSAL AND  
PLANTAR SUPPORT

### 3. + SUPPORT

The support applications in the sole of the foot are created to protect the plantar arch and metatarsal bones from flexing, thus preventing muscular injuries.

ENSURES MAXIMUM STABILITY;  
PREVENTS THE ONSET OF  
TRAUMA AND INJURIES AND  
ASSISTS DURING SUDDEN LEAPS  
AND CHANGES OF DIRECTION,  
SPEEDS UP RECOVERY

**BASIC COLORS**  
white, black, fluo yellow

**FANTASY COLORS**  
fucsia/purple, cube light blue,  
tritis multicolor

**SIZES**  
XS/S, M/L, L/XL

CONTROL SYSTEM

**4. + CONTROL**

The spiral-shaped application in the pivot area of the foot offers grip and support in the phase of change of direction by discharging the weight on the ground.

PLANTAR COMPRESSION

**5. + COMPRESSION**

The patented plantar compression optimizes venous return, thus improving the exchange of metabolic slags, increasing muscle oxygenation and preventing injuries.

SPEED BOOSTER SYSTEM

**6. + PERFORMANCE**

Thanks to the applications with different thickness at the base of the 5th and the 1st metatarsal bone, the motion of the breech propeller is enhanced, thus helping the physiological movement of the foot while snapping.

TAPE APPLICATION SYSTEM

**7. + THRUST**

The special design of the sock, without the heel, along with the Tape System, facilitates the return of the foot to the lying position during the movement, facilitates the discharge, amortizes the impact with the ground and guarantees a sense of thrust.

TIBIAL FIXING SYSTEM

**8. + ADHERENCE**

The elastomeric gripping application inside the cuff ensures that the sock is well fixed on the leg and allows the tape system to guarantee perfect tension.

TAPE APPLICATION SYSTEM

**9. + PREVENTION + SUPPORT**

The Tape application system protects the Achilles tendon from any possible direct and indirect trauma. The kinesio tape application stabilises the tendon of the plantar muscle, thus reducing microtraumas and preventing inflammation and injuries.

EXTERNAL SEAMS

**10. + COMFORT - BLISTERS**

The applications are fixed externally without the use of yarns inside the sock. This leads to a consequent reduction of blisters and an increase in comfort.

ECOLOGICAL YARNS

**11. + GREEN**

Our yarn comes from plastic bottle recycling, so we can contribute to the development of circular economy, environmental protection and an eco-sustainable vision of the future.
