

# PRACTICAL PROJECT MANAGEMENT TRAINING

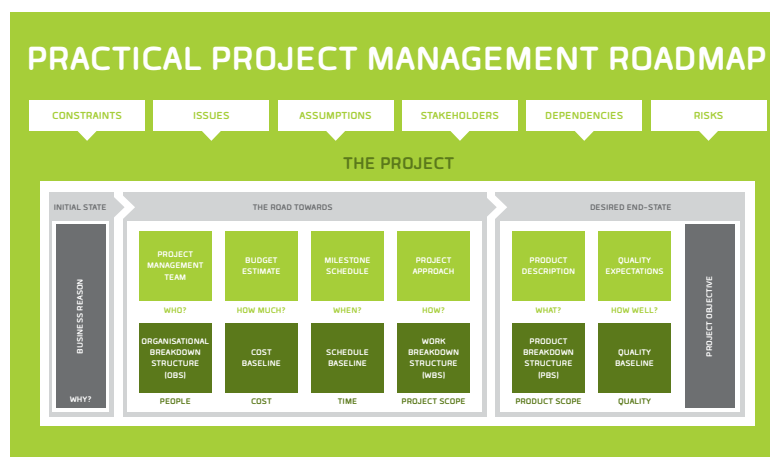

## PRACTICAL PROJECT MANAGEMENT, 3 OR 4 DAYS

Prosource has developed the Practical Project Management (PPM) course to help project managers apply project management best practices to their daily work. PPM offers current and future managers a truly unique set of practical information - readily available for use in real-life projects. Topics such as project scoping, estimating, planning, status reporting, risk management and many others are all clearly explained and put into practice by means of examples. The course is 3 or 4 days, depending upon the number of exercises (same scope).

## COURSE TOPICS

- » **Project initiation:** how to match expectations and create consensus among project stakeholders?
- » **Project planning:** how to make a detailed plan to guide the team?
- » **Project execution:** how to coordinate people and resources?
- » **Project monitoring & control:** how to identify deviations from plan and take timely corrective actions?
- » **Project closing:** how to bring a project to an orderly end?

To facilitate achievement of course objectives, we use the unique Prosource-developed Practical Project Management Roadmap as a practical guide for project initiation and planning.

Participants will have the opportunity to apply immediately the learned concepts and techniques on the “More Cars” case study. This case study, based on a true story, will be used as the common thread throughout the course.

## COURSE MATERIALS

### Course participants will receive:

- » A binder with full-colour presentation material (ppt format)
- » Some “How-to-do” reference sheets for important principles such as Earned Value Management, Risk Management,
- » The unique Practical Project Management Roadmap poster
- » All cases and solutions including templates (electronic format)
- » Additional reference material (electronic format)
