TABLE OF CONTENTS
SHARK Helmets is owned by the 2R Holding Group, which is specialized in “Riders” equipment (hence the name “2R”) across all segments. Through its motorcycle division, showcased by the company’s 4 complementary high-profile brands (SHARK Helmets, Bering, Bagster and Segura), 2R Holding today enjoys the status of global market leader in supplying the full gamut of motorcycle equipment (helmets, leather and fabric goods, luggage, saddlery, etc.).

In 2016, the Cairn outdoor/ski accessories brand joined the Group’s other brands to create the Outdoor Division and develop a complementary product line for sports enthusiasts in this segment.

The Group is active in many international markets and bases its growth strategy on a strong capacity to innovate as a means of enhancing performance as well as safety. It presently benefits from the solidity of a multi-brand entity (with all brands being highly reputed leaders in their respective fields) and moreover capitalizes on the strength and notoriety of each individual brand in order to expand and conquer new markets.

The “technically sophisticated” products designed and marketed by the Group’s various brands are intended for a very broad clientele, spanning both professionals and amateurs involved in racing, road trips, motocross, urban rides or outdoor sports.

The Group’s headquarters are located in Marseille and its French facilities (plant/office) are set up in Paris, Lyon and Normandy. Its foreign installations include: two plants in Portugal and Thailand, marketing offices in several countries throughout the world, and an Asian sourcing office.

STYLING:
At the heart of design
All SHARK helmets are designed in France at our head office, overseen by the Research & Development Unit.
Every year, our teams work on creating new models, at the cutting edge of technology, all of them being designed from scratch, which is what makes our products so unique and innovative.
The end user is the focus of our product creation process. Each SHARK helmet is in essence designed according to the principle of “Reverse engineering”: the user’s body shape is the starting point in manufacturing all our products.
During this creation process, “Design for a Function” is our motto: each line, each curve, each function serves a purpose.
Our completely original decoration styles are inspired by current market trends across all settings (fashion, automobile, etc.).

INNOVATION:
Improving performance as a means of providing better protection
To develop our helmets, we use the most powerful software applications, which in fact are identical to those preferred in the aerospace and automobile fields.
Our prototypes are produced on a next generation 3D printer set up inside our R&D Unit.
We rely heavily on CFD (Computational Fluid Dynamics) studies in order to optimize the aerodynamic profile of our helmets and their penetration in air, in addition to reducing the “buffeting effect”, acoustic nuisances and the aerodynamic drag coefficient (CX).

SAFETY:
Our ultimate goal
In developing our helmets and consistently tweaking them in pursuit of safety and reliability, our Research, Development and Innovation teams enjoy regular contact with many of our partners, including:
The FIM (International Motorcycling Federation) within the scope of “FIM Racing Homologation Program”: a standard reserved for competitive motorcycle riding that will be more stringent than the regulatory standards currently in effect.
University teams composed of specialists conducting landmark biomedical studies in terms of accident risk classification and protection of motorcyclists.
UNECE (The United Nations Economic Commission for Europe) along with many Ministries of Transport across the world, in order to dialogue and advance legislation emphasizing end user protection even more. The Standard UNECE 22-05, currently applicable in over 50 countries, is intended to be adapted and harmonized internationally. It has already been accepted by the AMA (American Motorcycle Association) competitions as well as in Australia since 2016.

http://sharp.direct.gov.uk/
SHARK Helmets has been relying on motorcycle racing to boost brand development ever since its creation. Now boasting nearly 70 world championship titles, the brand has successfully preserved ties with top international racers spanning disciplines from Moto GP to Endurance, including Superbike.

SHARK Helmets is also heavily involved in various national-level championships, for which it currently equips many racers:

- England: 22 racers in BSB, plus promising young competitors in the British Talent Cup
- Spain: 28 racers competing in the CEV and RFME championships
- France: over 20 racers competing in the FSBK championship.

Throughout the world, our distributors are also showcasing the brand in an array of national competitions in places like Australia, Brazil and the Benelux countries, to name a few.
SHARK Helmets offers top-end helmets, which are also worn by top-level riders, because there can be no compromise on safety at high speed. These riders are involved in all the product development phases and enable us to constantly innovate.
A helmet built with a COVA (Carbon On View & Aramid) structure: lightweight, resistance to both abrasion and compression, effective at preventing delamination, shock absorption.

An “Optics 1” category flat visor without any visual distortion thanks to a variable thickness (4.2 / 2.8 mm).

Double back spoiler to ensure both aerodynamics and stability at high speed.

**Key Features**

1. **NEW COVA STRUCTURE**
2. **OPTICAL CLASS “1” VISOR**
3. **DOUBLE BACK Spoiler**

Monster Mat®
Performance & style. The Shark Helmets Sport range of racing style helmets use the technology created by our racing R&D.
Double spoiler with incorporated air extractors: optimization of the aerodynamic trail and internal cooling.

Autoseal system: flattens the visor onto the helmet, offers better soundproofing and seals the helmet (against water and cold).

“SHARK skin” peak side fastenings: passive reduction of aerodynamic noise.

Micro-tech interior with antibacterial properties under the «AEGIS» label.

SHARKTOOTH®
PRIME
MOTORBIKE WIRELESS
ENTERTAINMENT SYSTEM

Enjoy the feeling of riding your motorcycle while remaining connected to your phone for listening to music, following the directions of your GPS, and making or receiving calls.

Easy to assemble, SHARKTOOTH® PRIME also serves as an intercom linking driver with passenger or one motorcycle with another. «Extra slim» and very high quality headphones:

- optimal comfort
- A2DP (Advanced Audio Distribution Profile) stereo music

100% waterproof external control system featuring minimal encumbrance: both discretion and maximum safety guaranteed.

Rechargeable battery (USB micro port), 8 hours of autonomy in conversation mode. Technically sophisticated microphone with a swivel arm and «DSP» (Digital Signal Processor) technology:

- reduces background noise
- ensures top voice quality
- Ergonomic amenity: managing all functionalities via just two external buttons
- Programming assistance:
  - Red and blue light indicator
  - Voice guide

Ultra lightweight intercom (weighs a mere 75 g), causing no additional tension in the neck area.

- Universal intercom (linkage possible with all “universal” intercoms)
- 2-year warranty
