

NCS Colour course, now as e-learning

NCS in Design is an introduction course for professionals. Focus lies on colour design principles and benefits of the NCS System.

Are you a designer wanting to deepen your colour knowledge? Or do you work in a paint shop, wanting to gain increased confidence in guiding your customers in their colour decisions? Now you can learn all this – online – whenever you want, wherever you are. NCS e-learning course *NCS in Design* gives you the possibility to learn how to work with the smartness of NCS – Natural Colour System as well as gain basic knowledge about colour design.

NCS in Design works online on all platforms and/or smartphones. The course takes approximately 3 hours to complete.

During the course you will learn:

- The importance of colour.
- Professional colour communication.
- Colour design principles.
- How to use the NCS System in design work.
- Colour areas and combinations.
- The difference between perceived and inherent colours.

When you have concluded the course, you will be able to create colour harmonies and combinations as well as make conscious colour decisions. You will also have gained the knowledge to analyse and choose colours based on their impact in different environments.

NCS in Design is a basic course and is intended for:

- Those who work or would like to work more with colour in architecture, design and interior design.
- Professionals advising in colours (e.g. paint shop staff) who want to learn the fundamentals of colour and the Natural Colour System. NCS in Design gives in-depth knowledge about the NCS System and how to use it when guiding customers in their colour decisions.
