

New web app from NCS bridges digital and physical

**Discover NCS+ Web.
developed for architects &
designers who want to work
digitally with colour.**

NCS Colour has a long history of providing physical and digital colour design tools. The past couple of years, NCS has worked on expanding the product ecosystem further to even better support creative professionals in their work with colour. This has resulted in the latest addition to the NCS' product portfolio: **NCS+ Web**, an innovative web app which bridges impactful colour work with desktop compatibility.

“We are super excited to launch the latest extension of the NCS product ecosystem. We believe this is the missing piece in our quest to fully empower impactful colour choices across the many domains of the creative industry.”

- Emil Bergwik, Product Manager, NCS Colour

DISCOVER A UNIQUE SET OF FEATURES

NCS+ Web enables creative professionals to explore, select, collaborate and communicate colour, powered by the science behind NCS - Natural Colour System®.

- Find the **NCS Notation** – translate colours to and from other formats such as RAL, RGB, CMYK, Hex and L*a*b.
- Access NCS **colour collections**, including the additional 100 new colours and trend colours.
- **Navigator** – this feature allows the user to visually select any colour and from that move in different directions, navigating amongst all 2050 NCS Standard colours.
- **Collaborative boards** – add colours and images and share the results and palettes with colleagues or clients.
- **Combine** – find harmonising colours based on similarities in hue, nuance, blackness or chromaticness.
- **Export** data to other software such as Adobe, Figma or Powerpoint.

NCS+ Web is easily accessed via plus.ncscolour.com, choose between a monthly or yearly subscription plan with two weeks free trial. NCS+ is also available as native app, meaning any changes made in the web app will also be updated in real time in the mobile version.
