

# Royal Belgian Caviar

Turnhout, Belgium

Over the last two decades, Royal Belgian Caviar, also known as Aqua Bio, has evolved from producing innovative aquaculture feeds to becoming an international authority on raising sturgeon and producing caviar. From the fertilization of the egg to the final packing of caviar, every step is meticulously controlled and monitored by the hands-on owners, Dr. Verdunck and his wife, Mia. The sturgeon are raised in a bluehouse, which is an above ground indoor recirculating aquaculture system. This allows them to monitor the light, quality of water, and feed at a level not possible otherwise. Browne Trading Company is the exclusive importer of Royal Belgian Caviar in the United States.

Royal Belgian Caviar

# Belgian Siberian

(Acipenser Baerii)

Siberian caviar typically has a small pearl size and a very delicate texture. What makes Royal Belgian siberian special is its noticably large pearl and firm texture. This siberian easily has the largest pearl size of the siberians that we carry due to Royal Belgian raising their fish longer than most farms.

Species: siberian sturgeon  
Color: dark charcoal  
Taste: mildly sweet  
Size of pearls: 2.3-2.7mm  
Maturation: 8-12 years  
Aquaculture: bluehouse

## Tasting Notes

Larger pearl for a siberian caviar. Expect an especially nice mouth feel. Mild with a beautiful, clean, and briny finish.
