A M L E T O
P I C E R N O
C E R A S O

With these products,
we complete the first collection
of Mediterranea, in which we seek
to deepen the relationship
between innovation, design,
and sustainability.

The conceptual mix
between craftsmanship and new
technologies, tradition
and innovation, European
and Mediterranean cultures
has been our guide throughout
the entire design inspiration
process.

This approach has led us to
experiment with the dialogue
between products made with new
technologies and more classic
materials such as wood, fabric
and glass.

A concept that we wanted to make
even more explicit with the
production of new pieces
alluding to cultural iconography
that is part of our identity
and that interact with new forms
and functions.

MEDAARCH

WE
DESIGN A
DIFFERENT
FUTURE

MEDAARCH

We are an architecture and design firm, specialized in innovative processes and technologies, from computational design to digital fabrication, with the aim to work for a new urban, ethical and sustainable dimension.

Founded in 2007 in Cava de' Tirreni, city on the outskirts of the Amalfi Coast, Medaarch is a multidisciplinary company capable of injecting innovation into the various contests in which it operates.

Our projects are inspired by a vision of the future in which digital technologies and humanistic approach go hand in hand, having sustainability as the main and essential objective.

We have always worked with experimental methods, contents and materials in order to create tailor-made and ecological solutions. We can do this thanks to a Research and Development department within the company.

A way to look to the future by continuously experimenting with possible solutions and horizons to improve the quality of life and work in this world.

Medaarch renews the tradition of the Renaissance workshop, the heritage that has made Made in Italy great all over the world, enabling talents to a new and contemporary vision of Arts and Crafts.

We have been working for years in the transfer of knowledge and technologies, equipping artisans and professionals with the necessary skills to manage the innovation processes required by the market and to make these models their own.

With the same spirit we worked on the Mediterranea collection, combining the talent of Italian design, new technologies and the beauty of Made in Italy craftsmanship, to create objects that embody our vision and our passion.

MEDITERRANEA,
THE COLLECTION
OF INDOOR & OUTDOOR
FURNITURE BY MEDAARCH,
COMES FROM THE
ENCOUNTER BETWEEN
TRADITIONAL TOOLS
OF MADE IN ITALY
CRAFTSMANSHIP
AND DIGITAL
FABRICATION.

Mediterranea collection investigates the relationship between innovation and tradition. Our furnishings are made with an additive manufacturing process, and are generated thanks to a computational approach to design. The goal is to define bold geometric shapes ensuring the resistance of the surfaces, dynamism and lightness, minimizing the use of the material.

For the creation of Mediterranean products we use eco-sustainable, biodegradable and 100% recyclable materials, with the aim to re-define the image of the plastic furniture with a Mediterranean soul, in the name of innovation and sustainability in order to make it functional, aesthetically pleasing and comfortable.

The furnishings and accessories created by Medaarch are designed, on one hand, to have no negative impact on the environment and, on the other, to meet the needs of modern life by making unique spaces and enhancing the experience of anyone who lives in them.

Dining tables, high stools, sculptural coffee tables and 3D printed vases create a refined space of sociality and beauty thanks to an innovative and sustainable design approach that invites Mediterranean elegance and conviviality, characterizing the environments with a strong identity.

COFFEE
TABLE

Inspired by the oldest and largest market in the Sicilian city, Ballarò is a 3D printed coffee table in PLA, capable of generating comfortable atmospheres.

.....

Born from the meeting of innovative design, digital processes and craftsmanship, this product speaks of Sicilian culture, sociability and elegant aesthetics.

HIGH
TABLE

Dimensions (cm)	Height (cm)	Weight (kg)	Material
Ø 80	99	16	PLA

The round top in PLA is thin while its shape is voluminous. The choice of sustainable materials, the innovative manufacturing process and its essential shape, make Enna high table a design sculpture that gives a contemporary feel to the home becoming an invitation to hospitality and sharing.

Inspired by the highest provincial capital in Italy, Enna is a high table, designed and 3D printed.

Its particular design makes Erice an invitation to Mediterranean elegance and conviviality, without renouncing to the functionality of the object.

DINING
TABLE

Erica is a round dining table that blends craftsmanship and digital processes, tradition and innovation. The support of the table is a 3D printed conical trunk while the round glass topping allows the entire object to be seen, also making the table support structure explicit.

Dimensions (cm)
Ø 130

COFFEE TABLE

Lissa, the sculptural coffee table in PLA enhanced by the glass topping, is an invitation to the conviviality typical of the Mediterranean culture. The design is modern and decisive, perfect to be inserted in comfortable environments, in which to feel at ease.

The base of Lissa table is not massive and made with biodegradable plastic, while the glass top shows the structure of the table.

ARMCHAIR

The mood of the armchair plays with the combination of different materials - the plastic of the 3D printed shell and the seat cushion -, which become even more comfortable, functional and fun thanks to the freedom left to the customer to combine them, playing with colors and satisfying everyone's needs.

Generous and enveloping in design, Lissa armchair profile evokes a warm embrace, exactly like the bay from which the product takes its name, where users can find intimacy and protection also thanks to the soft padded seat.
