Suggested Daily Care Routine

You might find the following guidelines useful to provide the ultimate tracheostomy care and management regime.

SKIN CARE

Clean skin and the tracheostomy site/stoma and apply TRACHI-WIPE to provide a skin barrier against secretions.

Use TRACHI-HOLD to provide secure positioning of the tracheostomy tube. Kapitex offer a choice of sizes to provide the best fit to maximise patient comfort.

TRACHI-SWAB

If you find it difficult to clean under the tracheostomy tube flange then TRACHI-SWABS are the solution. Use the small headed cleaning swab with saline to gently reach those difficult areas.

KAPI-GEL

Ideal for difficult stoma anatomy - providing cushioning behind the tracheostomy tube flange/neckplate.

3

AIRWAY PROTECTION

We recommend that tracheostomy tube users outside the critical care areas protect their airway by wearing BUCHANAN Protectors - a system which covers any type of tube to provide effective heat and moisture exchange.

TRACHEOSTOMY TUBE CLEANING

Tracheostomy tube inner cannulas should be cleaned at least on a daily basis to prevent the build up of mucus and keep the tube surfaces clean and ensure good hygiene. Our range of cleaning brushes, solutions and swabs are designed to clean plastic, silicone and silver tracheostomy tubes.

STORAGE

TRACHI-CASE, a handy aid for carrying and storing your tracheostomy care products at hospital or when travelling. This will help to maintain your daily care routine by ensuring that all your tracheostomy requisites are to hand in one secure carrying case.
