## Cleaning Manual Petra

### POST INSTALLATION

Use a descaler for expansion joints or a cement remover to eliminate any remaining cement, glue, or mortar residue.

To prevent scratching, avoid rubbing directly on the surface.

### ROUTINE CLEANING

For the routine cleaning, use water, liquid cleaners and soft cloths or non-abrasive sponges. Do not use scourers as they can damage the surface. Do not mix different cleaning products.

To periodically remove any remaining traces of limescale, use a limescale remover as follows:

1. Apply the limescale remover on the surface using a damp cloth.
2. Leave the product for at least 15 minutes, then rinse with water.

Avoid contact with nail polish, nail polish remover, solvents, etc. Clean with care to avoid damaging the logo.
