

# HEAVY METAL DETOX

Part of ESP Program\*

## Functional

Functionals focus on specific conditions and work to reduce, improve, restore, and assist the body to take or make corrective actions adding elements that can restore balance to the body.

## EFFECTIVE DAILY DEFENSE AGAINST HEAVY METALS AND ENVIRONMENTAL TOXINS

### THE ENEREX ADVANTAGE

- > Defends against the toxins that are increasingly a part of everyday life
- > Heavy metals such as lead and mercury are associated with many health issues
- > Heavy Metal Detox safely facilitates the release of heavy metals and environmental toxins from the body
- > Contains powerful Humic and Fulvic acids combined with cleansing minerals and raw kale for optimal detoxification
- > Also a comprehensive essential and trace mineral supplement
- > Ideal for those with exposure to vehicle exhaust, smoking, industrial pollutants (construction, mining, forestry, oil & gas), chlorine (swimmers), vaccinations, dental fillings, and more

### EACH VEGETARIAN CAPSULE CONTAINS:

#### Medicinal Ingredients:

Humic Acid (from 75 mg Ancient Peat) . . . . .	37.5 mg
Organic Raw Kale* ( <i>Brassica oleracea</i> ) Leaf . . . . .	116.5 mg
Potassium Citrate) . . . . .	37 mg
Magnesium (Sulfate) . . . . .	20 mg
Iron (Sulfate) . . . . .	14 mg
Zinc (Sulfate) . . . . .	10 mg
Manganese (Sulfate) . . . . .	3 mg
Copper (II Sulfate) . . . . .	2 mg
Molybdenum (Citrate) . . . . .	175 mcg
Selenium (Sodium Selenite) . . . . .	125 mcg
Vanadium (Citrate) . . . . .	91 mcg
Cobalt (Cyanocobalamin) . . . . .	22 mcg

There are no other ingredients added to this formula.

\*Certified Organic by QAI (Quality Assurance International).

**ADULTS:** Take 1 capsule once or twice per day or as directed by a health care practitioner.

80042562

Heavy metals and environmental toxins surround us as a fact of modern life; Enerex Heavy Metal Detox offers a daily defense, acting as a powerful natural cleansing agent.

Humic and fulvic acids, derived from the organic biomass of Hungarian peat bogs, are the main component of this formula. These compounds work to gently and safely remove heavy metals and toxins from the body, without the concerns of reabsorption associated with many heavy

metal or chelation therapies. Due to their ion exchange properties, they bind to and remove heavy metals such as lead, cadmium, and mercury.

Heavy Metal Detox combines humic and fulvic acids with detoxifying minerals and raw kale to provide maximum effect for those with exposure to vehicle exhaust, smoking, industrial pollutants (construction, mining, forestry, oil & gas), chlorine (swimmers), vaccinations, dental fillings, and more.

# HEAVY METAL DETOX

## HEAVY METAL DETOX CONTAINS:

**Humic and Fulvic Acids.** The humic and fulvic acids in Heavy Metal Detox are obtained from a 10,000 year old peat deposit on the shores of Hungary's Lake Balaton. Humic and fulvic acids are very efficient chelators and ion exchangers. By organically binding trace minerals, they assist in the incorporation of these trace minerals into organisms more efficiently than inorganic forms, such as found in most commercial vitamin/mineral supplements. Humic and fulvic acids enter into virtually all life processes within plants and animals. When necessary; they act as free-radical scavengers, supply vital electrolytes, enhance and transport nutrients, catalyze enzyme reactions, stimulate metabolism, chelate essential major and trace elements making them organic, and demonstrate amazing capacity for electrochemical balance.

## MINERALS:

**Cobalt** is known to influence iron metabolism and increase the haemoglobin concentration in red blood cells. Necessary for the biological activity of vitamin B12, and amino acid metabolism.

**Copper** plays a significant part in the formation of red blood cells. In combination with zinc, copper acts as a powerful antioxidant.

**Iron** is the basic component of haemoglobin, the oxygen-carrying protein in red blood cells. It is an essential to the body's ability to maintain energy. Iron also potentiates the elimination of toxic lead.

**Magnesium** plays a key role in maintaining nerve function, and neuromuscular transmission and activity. Magnesium is involved in more than 300 enzyme reactions in the body, and is thought to help protect against the toxic effects of excessive aluminum intake.

**Manganese** is involved in the metabolism of fats, proteins, and energy. It is required for bone growth and development, and reproduction. Iron supplements can impact the retention of this essential nutrient, therefore it is imperative to include manganese as a supplement with iron.

**Molybdenum** functions as an enzyme cofactor in many biochemical reactions, and acts as an electron transfer agent in oxidation-reduction reactions.

**Potassium** is an essential element in maintaining fluid balance in our cells, and contributes to the transmission of nerve impulses, the control of skeletal muscle contractility, and the maintenance of normal blood pressure.

**Selenium** is best known as an antioxidant. There is evidence that selenium may protect against certain cancers. Selenium is also thought to protect against the effects toxic elements such as arsenic, mercury, and cadmium.

**Vanadium** has been shown to be an essential trace element in the growth of animals. Recent research has indicated its use in the treatment of diabetes, hypertension, and lowering of serum cholesterol.

**Zinc** is essential for the functioning of over 200 enzymes in biologic systems. Zinc is important in the structure and function of biomembranes, and in the synthesis of DNA and RNA. Zinc plays a role in immunity, wound healing, and the functioning of the central nervous system. The presence of zinc is especially important in preventing toxicity of metal ions, such as lead, arsenic, and cadmium.
