“A Cut Above the Rest”

Alkaline water has a naturally high pH level ranging anywhere from 8 to 9.5. The average diet of most people consists of foods that are highly acidic with a range between 3.3 to 5.

By consuming alkaline water in place of tap water, you can help your body find the natural balance that it seeks.

When water passes through the filters in this system, it breaks up the clusters of water molecules into smaller clusters. This makes it easier for your body to absorb so you stay better hydrated by drinking alkaline filtered water rather than just tap or bottled water.

Naturally occurring in our bodies there are such things called oxygen free radicals which are missing electrons and in order to fill that void they will steal them from your body's healthy, normal cells.

By drinking alkaline water which is rich with antioxidants you are introducing extra electrons to your body which is made up of 70% water, helping you keep your cells healthy without any damage from the free radicals.

Our system uses a series of different media to make your water more alkaline rather than using electronic technology. So we save you money, energy, and the hassle of having to replace ridiculously expensive broken electronic parts.

A healthy life style is easy to reach.

“A Cut Above the Rest”

What can help your body maintain optimum health, tastes great, is completely natural, both hydrates & detoxes your body, promotes a neutral pH level in the body, and requires no extra effort on your part...

Drinking All Natural **alkaline** Water!

Alkaline inline system:

- Removes rust & prevents clouding
- Lowers "ORP" Oxidation Reduction Potential
- Adds antioxidants & calcium to water
- Increases pH
- Antibacterial
