

These drinking water faucets are superbly engineered with the latest technology to be extremely reliable and easy to use with a simple on/off quarter turn. The high quality ceramic disc shut off mechanism provides drip free operation without adjustment. The lead free faucet bodies can also be positioned for comfortable right or left hand operation and are made from NSF certified materials. Contact Aqua Safe on 1800 636 135

for details on products and particulars of manufacturer with NSF certified materials.

The spouts swivel 360° giving full access to sinks. The solid chrome plated lead-free brass body and ceramic discs are designed to exceed Australian Standards.

They can be mounted anywhere on the sink or directly through the benchtop with a simple 12mm hole.

For customers with existing Granite or Stone benchtops a professional may be required to cut the hole; or our stylish 3 way flick mixers can be used in place of the existing kitchen tap to dispense both regular hot/cold and filtered water.
