NASC certified  
for compliance with  
stringent supplement  
quality standards

**Rx Clay** Hydrated Calcium Aluminosilicate) is a montmorillonite class of clay that adsorbs bacterial toxins, inflammatory cytokines, and metabolic toxins in the gastrointestinal tract, resulting in improvement of stool quality.

A clinical trial in canine cancer patients who developed diarrhea as a side-effect of receiving chemotherapy found significant improvement following the oral administration of Rx Clay when first-tier therapeutics for diarrhea failed to improve stool quality.

Rx Clay is free of heavy metal contamination, contains no available aluminum, is sterilized and ground to 60 micron particle size for improved dispersion and more rapid onset of action.
