Personae

Dorelan's aim has always been to help people sleep well - all people.

That's why our research work and the products we create are increasingly unique, thanks to the expansion of our range of mattresses and accessories to meet as many needs as possible.

We made an in-depth study of these needs, and observed that consumers, their lifestyles and their consequent requirements fall into a series of archetypes.

"We're committed to spreading the culture of sleep and unleashing it in every one of us, because it's an innate power that's essential for our wellbeing.

The Personae collection is created to fully meet the needs of the consumer, who we at Dorelan call the persona".

Our promise

Sleep well, live better.

"It's a promise from our hearts, a professional credo based on the care and wellbeing of people who choose a new and wholesome way of resting; the very people who agree with our approach to sleep".

Mission

Improving the quality of people's sleep today, tomorrow, always.

We want to do this by spreading the culture of sleep, raising consumers' awareness, being an authoritative source of information.

We do all this through ongoing scientific research geared to improving the technology associated with sleep and by determinedly pursuing our goal, day after day.

"Our work is a combination of needs, focus on the product and science; a real innovation in tradition. We uphold the values we have always held and confirm them with the power of ideas and technology.

This is what we do, what we've done in the past and what we'll always do, with passion and dedication, always standing out for quality, research and details, and unhesitatingly avoiding shortcuts and ready-made solutions."

Vision

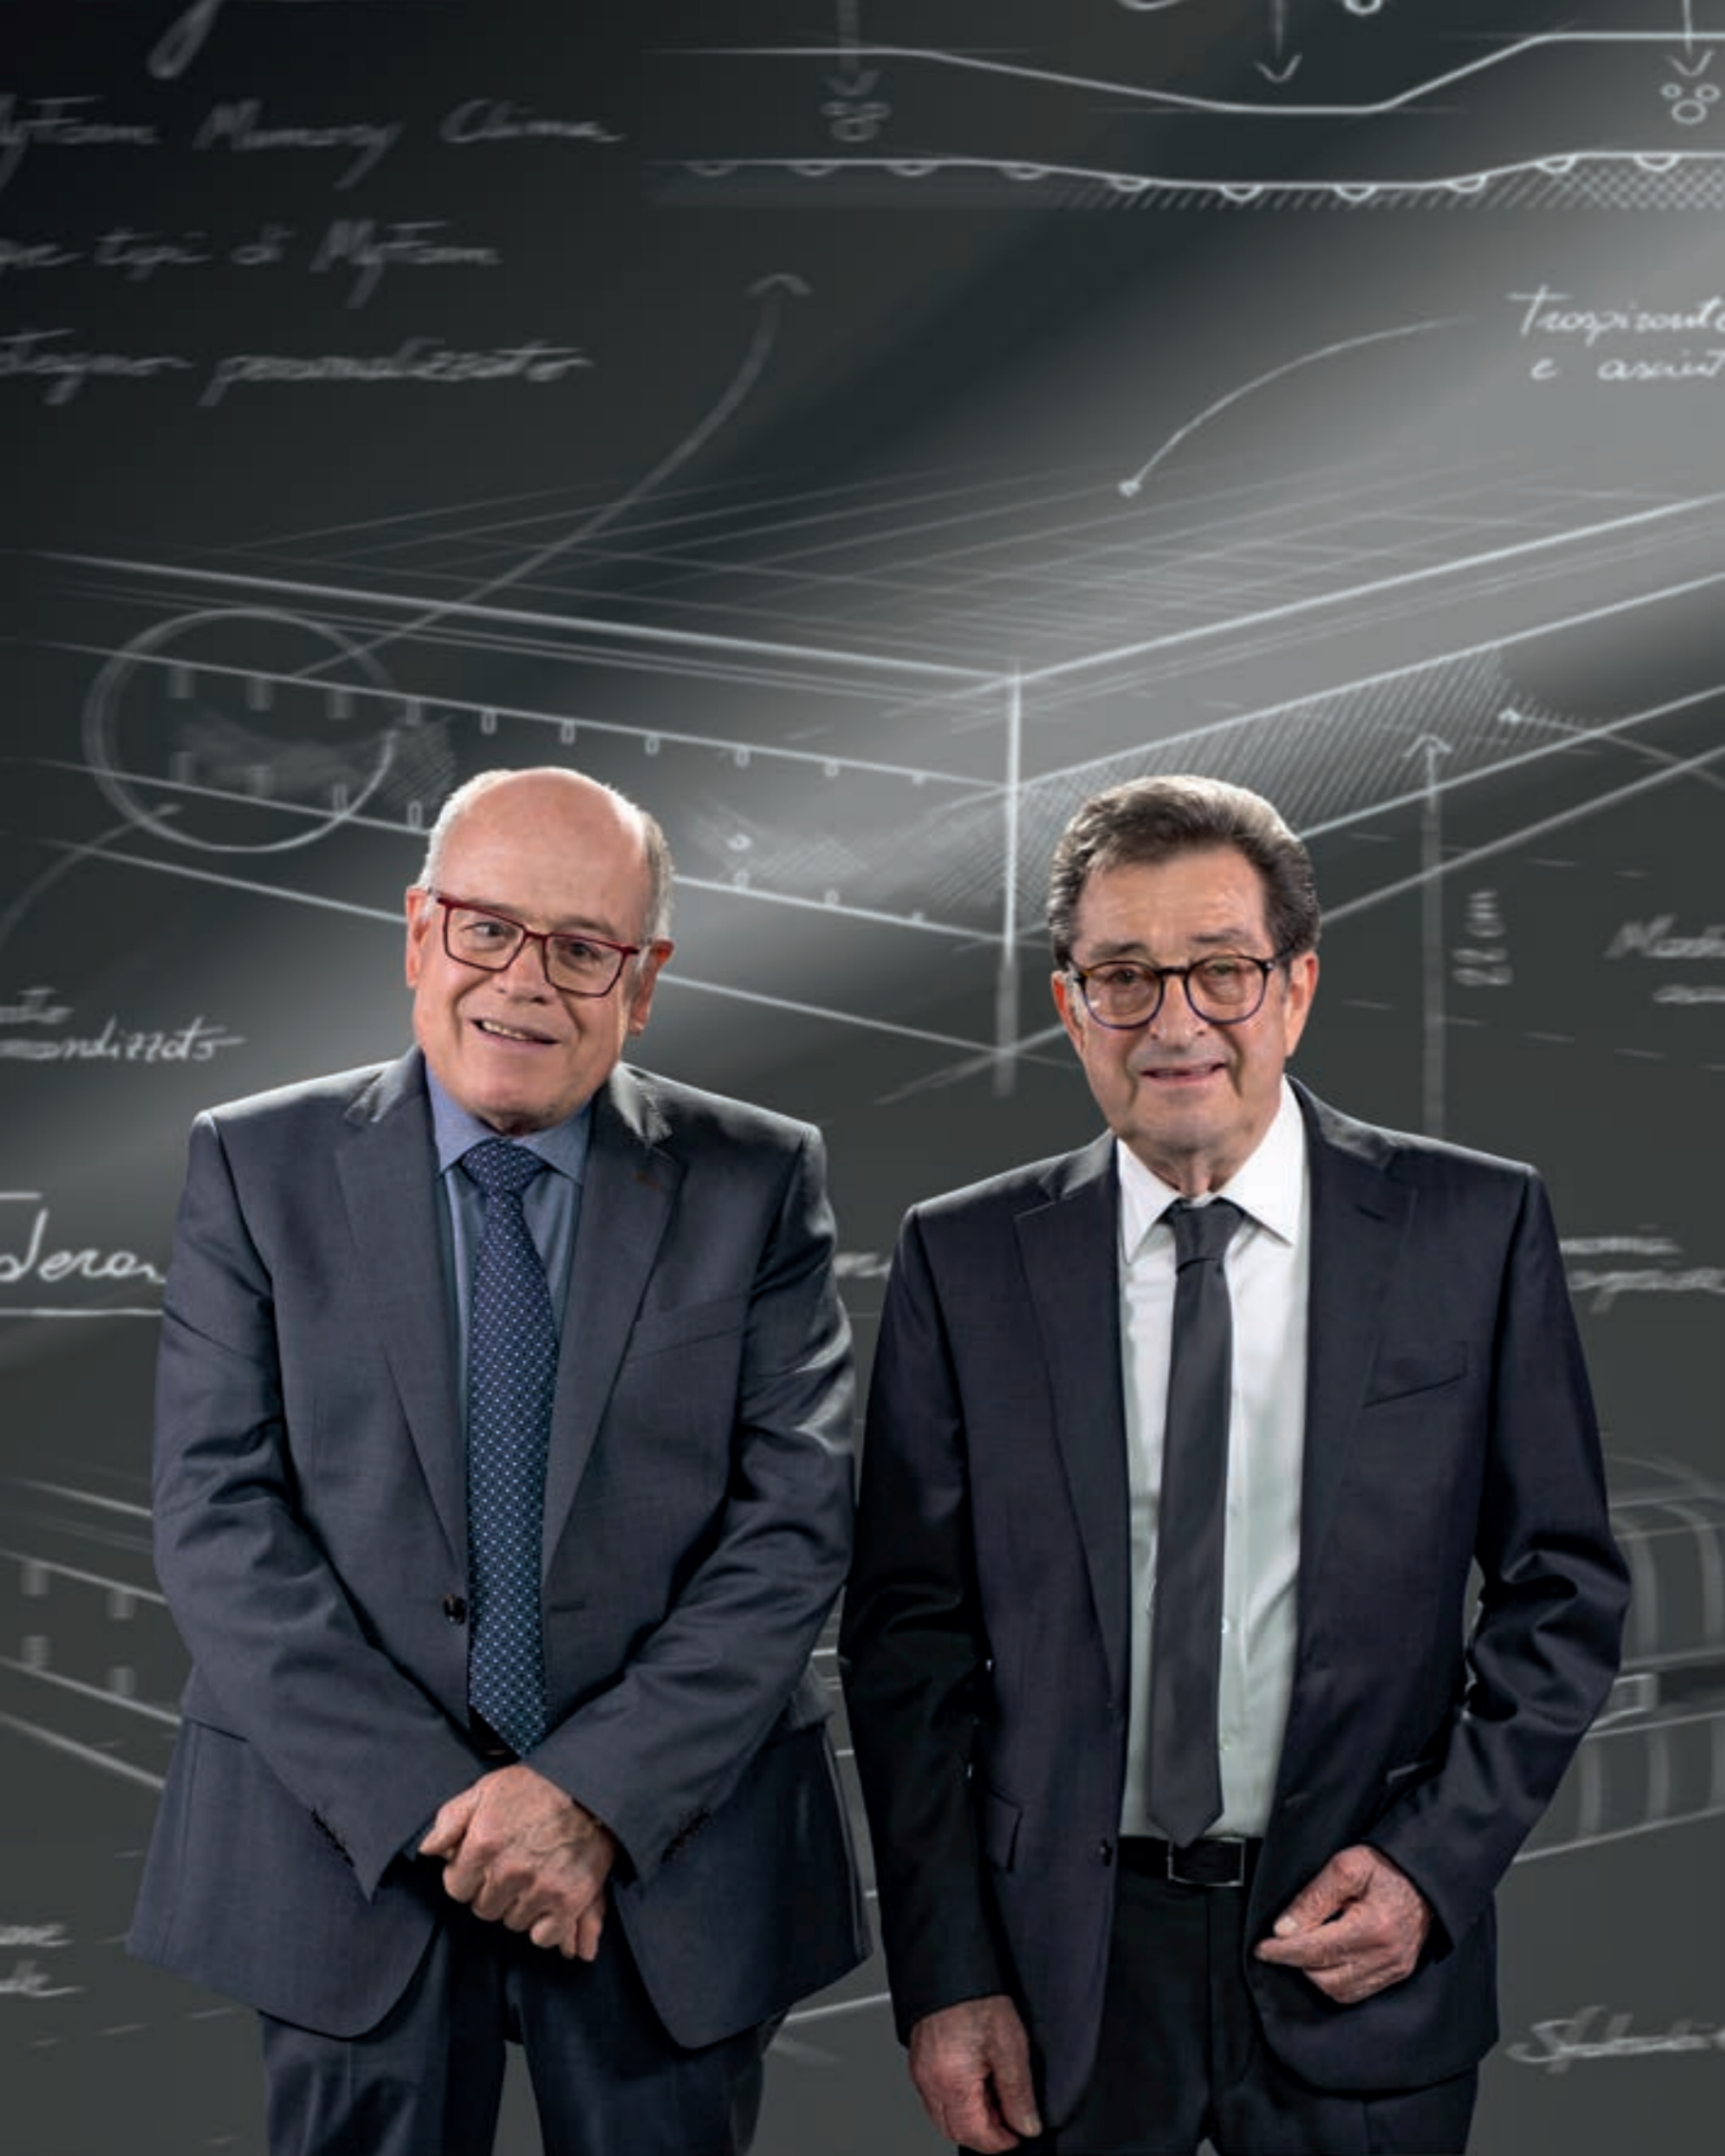

Sleep is a natural source of wellbeing.

The energy and alertness we bring to our days depend on its quality. For this reason it should be protected, safeguarded, prioritised, treated as a vital element of human health.

Sleep and wellbeing exist in equilibrium. We believe firmly in both, and this inspires us to give our best every day.

"We want to design excellent products of the very highest quality, and we want to do it in Italy, using great local materials, carefully selected."

This is why we put our approach to sleep into practise and make products to help people sleep well, an important part of living better.

The story of Dorelan

Dorelan's story is one of people, dreams and dedication.

It begins in 1968 when Diano Tura and Pietro Paolo Bergamaschi decide to leave their jobs and devote themselves to a more ambitious project: making superior quality mattresses. So, in a small garage in Forlì the first Dorelan products were born, made with all the taste and craftsmanship that have always distinguished Italian production.

From Forlì to the whole of Italy, and then the global market: constant growth, organic and patient. One step at a time, with a vision that prioritises quality, always. The founders obtain considerable investment in scientific research, technology and, above all, people.

Today Dorelan manufactures mattresses, toppers, pillows, bed bases and accessories, and also supplies the hotel industry, cruise companies and the world of sport.

With 450 employees and over 2000 sales points in Italy and abroad, the company increasingly looks overseas, with the solid, unwavering commitment to continue production in the place where Diano and Pietro Paolo's great dream began.

Today these values and the founders' mission are perpetuated by their children, who continue to work with tradition while embracing innovation. Dorelan's story is one of people, dreams and dedication.

Quality that exceeds expectations

Raw materials, technology and Italian design are the components which, when skilfully assembled, come together in the promise of better sleep.

Over time, our broad and flexible vision, which accommodates the changes of the future, has allowed us to go beyond mattress design and move into the construction of the entire bed system. It's a process of iteration that involves the whole system of rest: mattresses, beds, bases, slats, pillows and toppers, all developed to spread the culture of good sleep in people's lives while never abandoning the pillars of wellbeing: uniqueness and quality.

"People's needs are at the centre of every decision and process. We want people to have a superior and comfortable sleep experience; to this we devote our day-to-day work".

Where quality is born

Our factory is the beating heart of everything we do at Dorelan.

"It's the birthplace of products, ideas and patents. This is where our value happens, made of moments, precision, attention to detail and tireless passion for craftsmanship".

More than 40,000 square metres, including 10,000 of warehouses, and over 2,000 items produced every day.

Our competitive advantage comes from our combination of five areas of expertise - five companies in one - wood, chemicals, mechanics, upholstery and assembly. This makes us unique, not only because we control every aspect of production, but also because of the synergy automatically created in the manufacture of an excellent product, every stage of which can dialogue with the previous and subsequent stages.

At our factory we work with carefully selected raw materials to make all the components of mattresses, bases, pillows and beds. Both Myform material and every individual spring are produced at our headquarters, and this allows us to have total control at every stage of product development. The result is maximum uniformity, precision and performance.

Innovation takes shape

Uniqueness and quality: the two concepts that are ever-present in our work.

Unique, high-quality materials, technologies, methods and processes. This across-the-board approach lends itself to comprehensive customisation of the product, from the steel wire of springs to chemical processes, design and tailoring.

"Everything is designed in-house, and this means that even the smallest details are outstanding. Every component is designed to be unique, and manufactured with scrupulous control of the process. We can guarantee what we promise, 100%".

Our research starts with market analysis as we develop superior products; we listen to people's ideas and draw on archetypes, analysing their wellbeing needs and thus designing innovative and technically advanced structures, whose aesthetics and comfort are based on real needs. This combination allows us to make high-level products every time, in line with the ever-changing needs of consumers.

Made in Italy

"Made in Italy" is more than just a label: it is historically synonymous with quality, for a number of reasons.

First and foremost, we have worked in this sector for over 60 years, evaluating every aspect of product improvement and manufacturing techniques, allowing us to develop an artisan sensibility that means our production processes use materials selected personally by us, and guarantee high standards of quality and durability.

Second, and equally important, is the passion of our workers, who have been doing the job for years with dedication and attention to detail.

All-round sustainability

Dorelan's commitment to the environment

All our products are developed with respect for the environment, a central pillar of the company's mission. Today this work ethic remains a constant in our respect for our workers and customers. At Dorelan the careful use of resources is measurable, not based on pretty words and good intentions.

Energy

We have always been extremely attentive and sensitive to environmental issues. Over the years we have implemented various initiatives and internal processes to reduce our environmental impact. First of all through the use of renewable or certified green energy (solar, wind or hydroelectric). In addition to meeting the factory's energy needs, our photovoltaic system allows us to input clean, renewable surplus energy into the grid, thus further contributing to the community around us.

Since 2021, we have refurbished the lighting system in our production area, replacing all fluorescent lamps with new LED appliances. The aim is to reduce electricity consumption and costs, as well as reducing the need for maintenance. Every year this prevents the emission of 57.5 tonnes of CO₂, the equivalent of 2880 trees.

Water

Water is not used in our production processes. But we've gone further: to discourage the use of plastic, we've installed two drinking fountains delivering fresh filtered water free of charge for all our staff. Once a year the water in our storage tanks and drainage system is analysed, to guarantee the standard of water discharged into the public sewer system.

Rainwater is collected and stored for watering our green spaces.

I'm a Dreamer

At Dorelan we're firm believers in the importance of wellbeing, in all forms and settings. We work hard to spread the culture of sleep, but also wellbeing in a far broader sense.

Our company involves not only our people, but also the surrounding area, connecting with schools, institutions and social enterprises.

To this end we place great importance on projects that strengthen connections and create opportunities thanks to inclusive choices that engage young people, students and workers.

Dorelan supports ambitious and synergistic projects like I'm a Dreamer, an exemplary scheme that began in 2017 and involves young fashion students from the Istituto Tecnico Saffi-Alberti in Forlì, who have created models and prototypes for the SOGNO_RICICLO_CREO line for CavaRei, an integrated organisation that supports people with disabilities by developing their employment skills. Dorelan contributes by providing surplus textiles and other materials free of charge; these are used to produce unique, ethical and sustainable products.

Dorelan People

In addition to an appropriate training scheme, we have internally developed a series of team-building initiatives in order to strengthen both a sense of belonging and internal collaboration, involving workers from their very first day with the company. With this in mind, our in-house team has designed a Welcome Kit for new employees. Thanks to the reuse and recycling of production materials and the creativity and manual skills of the people at CavaRei, every individual can immediately begin to feel part of the Dorelan world and its philosophy.

We regularly assess the health of our organisation and the happiness of our employees by means of a specially designed survey. Over 50% of our staff took part in the most recent edition.

To improve our employees' quality of life, we organise team-building activities in which there are plenty of opportunities to spread the word about the importance of sleep.

Dorelan in the world

Those who choose Dorelan choose better sleep. Choose wellbeing.

Over time our company has built and consolidated a reputation all over the world, and today Dorelan mattresses are sold in the best stores.

2000 stores offer our products, and in recent years we have opened almost 200 single-brand concept stores where customers can learn more about the Dorelan approach to good sleep.

"For us it's a fine demonstration of trust, which we repay with unique products and greater added value".

A highly professional "made-to-measure" approach that's also reflected in our consultancy and assistance services to guarantee customer satisfaction. A genuine Dorelan experience, an immersion in a world where the priority is wellbeing, and everything else is secondary.

Myform technology

Myform Regen

Consisting of an innovative molecular structure that makes it very elastic and non-reactive to ambient temperature, this material gives constant performance throughout the year. Myform Regen guarantees comfort in any sleeping position. The elasticity of the material aids body movement during sleep, without compromising its ergonomic properties.

Myform Memory Clima

The material stabilises the temperature of the body in contact with the mattress. It ensures constant heat regulation, retaining or releasing heat when needed.

Myform Memory Air

This technology is designed to offer the optimum combination of comfort and breathability. The innovative molecular structure allows Myform Memory Air to adapt very precisely to the shape of the body, adjusting the degree of support and the elastic reaction on the basis of demand, while the high porosity ensures the correct movement of air for cool sleeping.

Myform Memory Air HD

The molecules of this material are small in size, and therefore guarantee a high degree of breathability and ergonomics.

Bearing in mind the characteristics and relative weight of the areas of the human body, we developed this material specifically for pillows, by adapting Myform Memory Air.

Myform Memory

Myform Memory is our formula to ensure optimum performance in terms of reactivity in the material while preserving its softness and elasticity. It has excellent ergonomic properties and effectively distributes the pressure of the body on the mattress. It facilitates the natural movements of sleep by means of the typical comfort of memory foam.

Myform Air

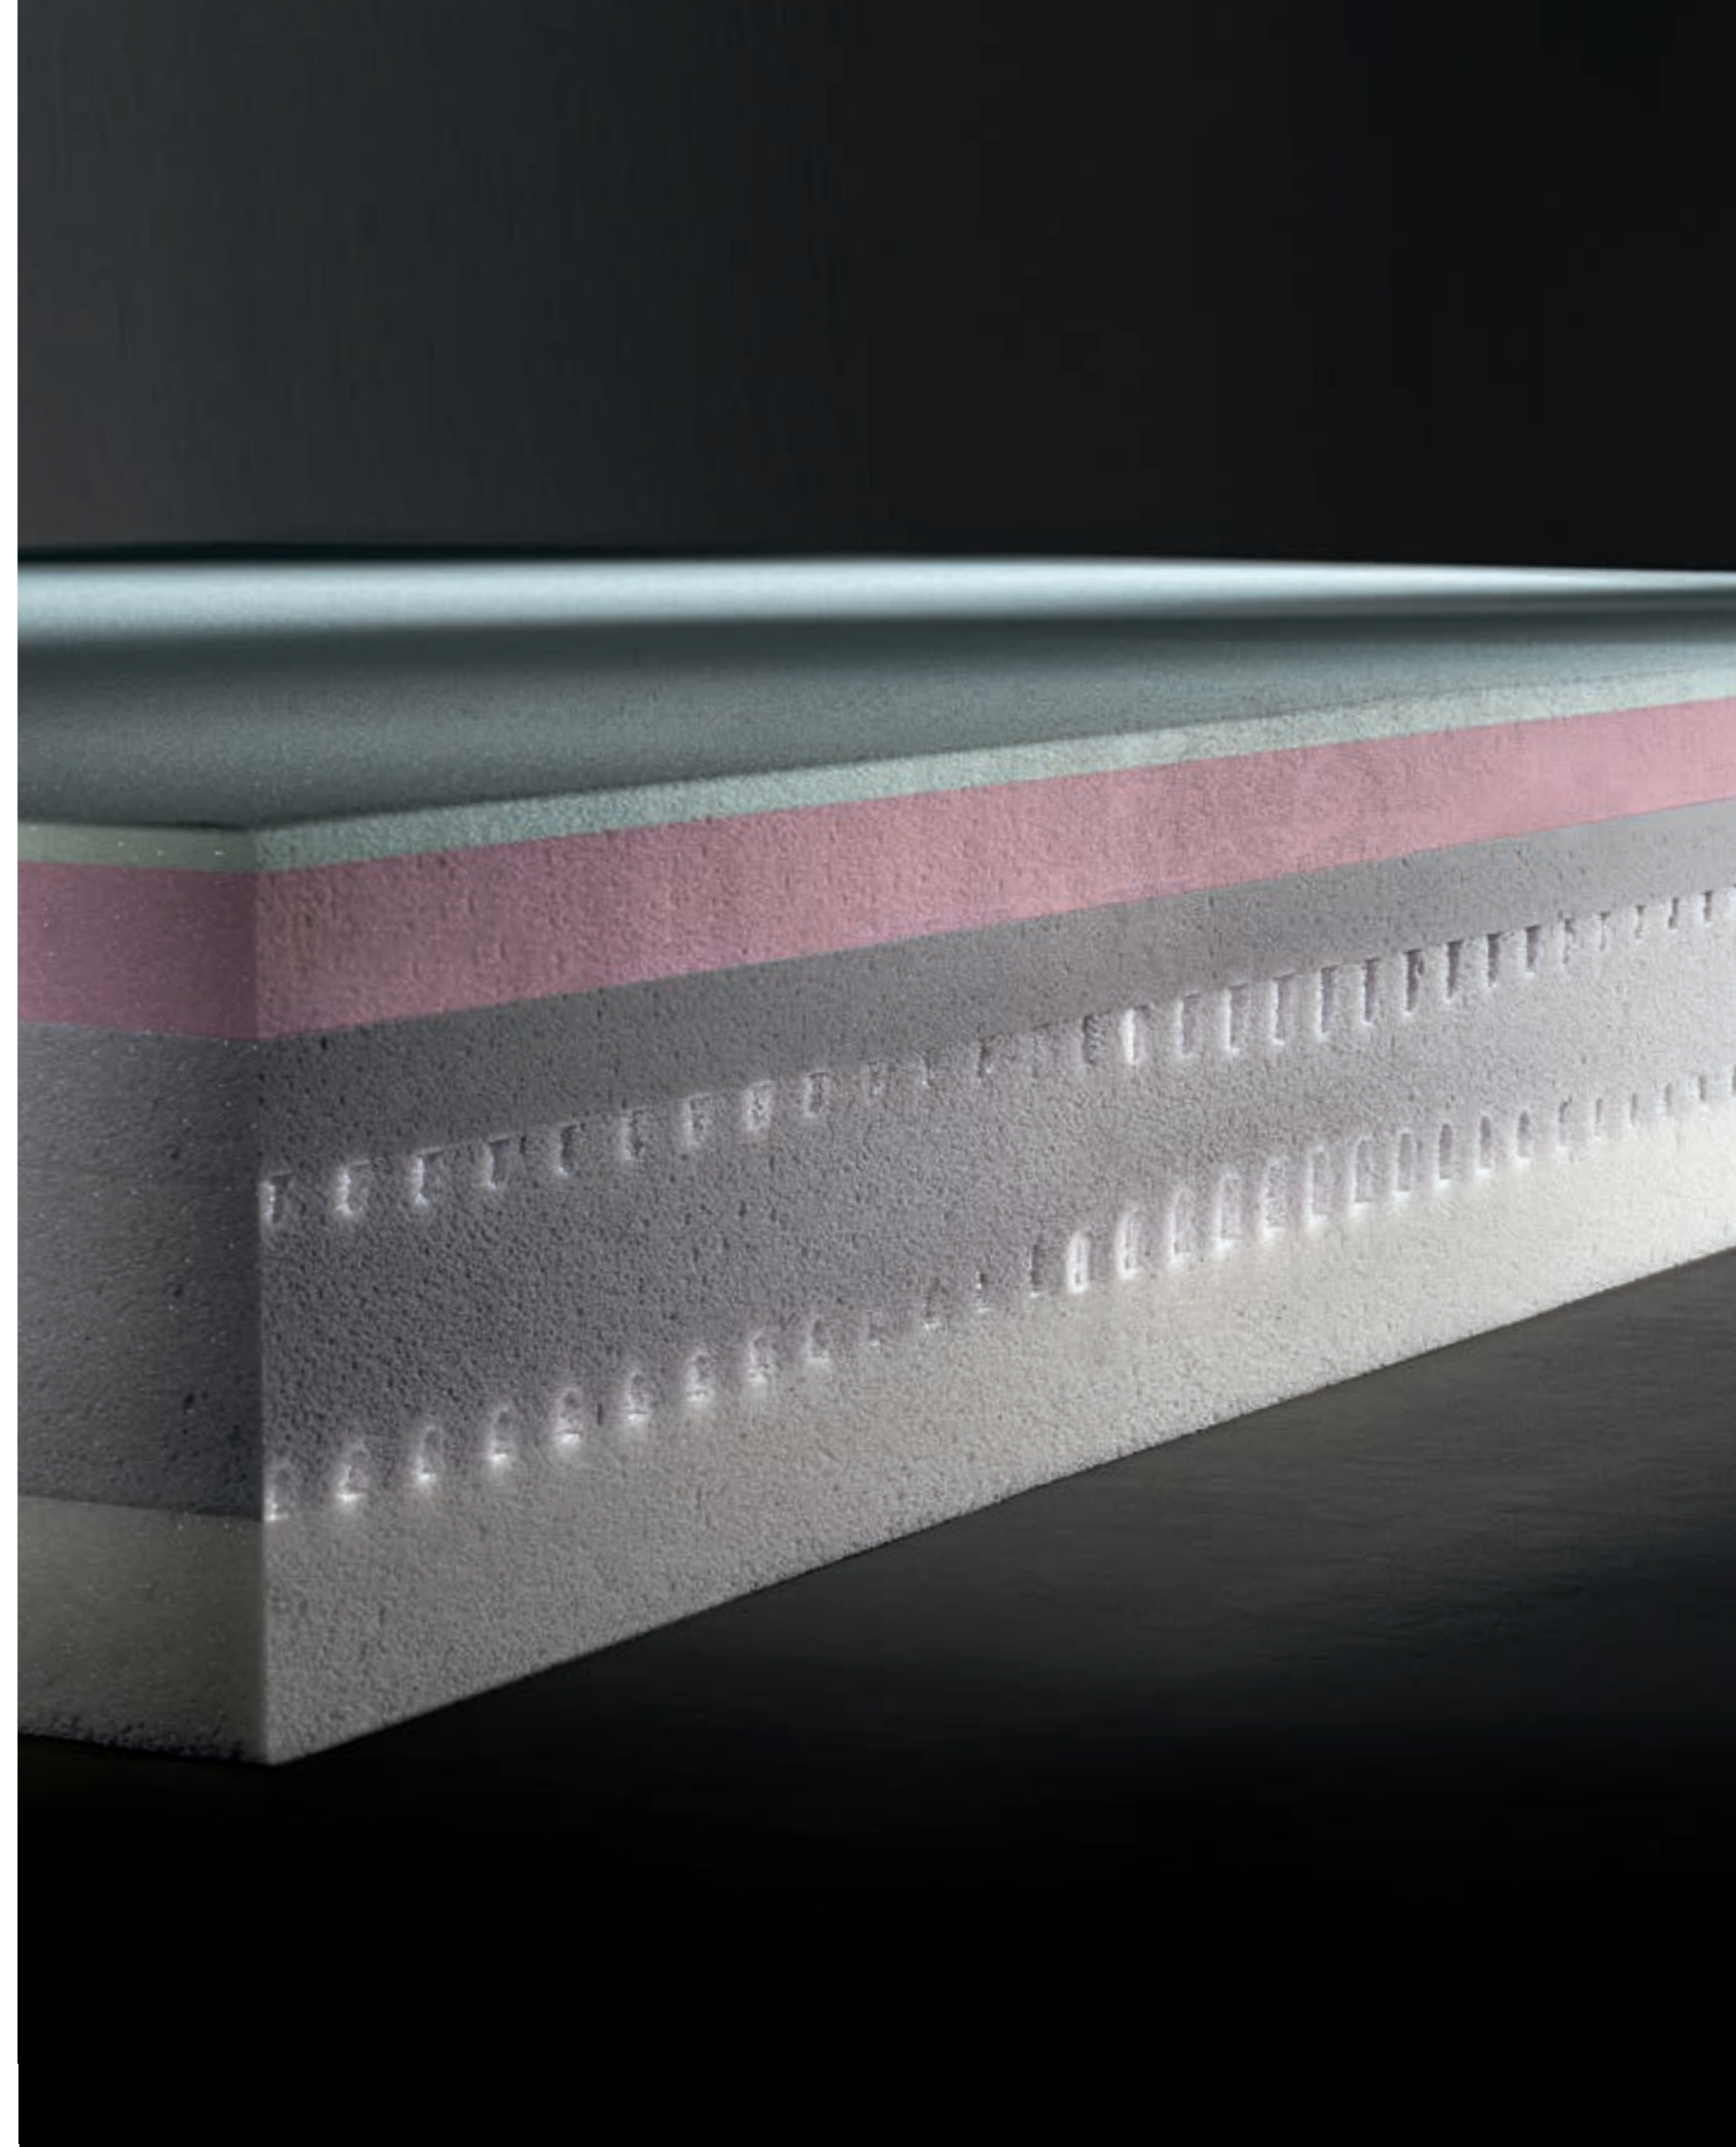

Myform Air is designed for use in warmer seasons or for those who need extra breathability during sleep. The large number of channels created within Myform Air ensure the passage of air in any situation, and maintain the highest level of hygiene.

Myform Extension

Thanks to its capacity for support, this material offers maximum elasticity in a balanced way, and ensures easy movement in sleep, resulting in excellent lasting comfort. Furthermore, the material is ergonomically stable in terms of external temperature.

Myform Extension Extra Soft

A variant of Myform Extension designed for use in coverings. Elastic and breathable, it guarantees long-lasting softness and protects the performance of fillings, even after washing.

Springs Technology

Adaptive spring system

Adaptive is a system with three independent types of pocketed springs with different degrees of rigidity. Adaptive springs vary in terms of the gauge of the wire, which provides different levels of support. The three types of spring are arranged in an innovative pattern inside the mattress to create areas of varying rigidity which maintain a constant reaction to the different pressure of the body on the mattress. To facilitate getting onto and off the mattress, the perimeter contains more rigid springs.

Twin spring system

A system of independent pocket springs featuring a twin concentric coil that provides the ideal balanced support for any body type and in any sleeping position. The external spring guarantees comfort and ergonomics; the inner one gives increased support in response to greater body pressure on the mattress. The springs are distributed over seven different areas, each calibrated to adapt to the pressure of the body and offering progressive yield on the basis of the points of contact.

Springs Technology

Next spring system

This system features springs enclosed in individual pockets and assembled in an arrangement of seven different areas in terms of spring density: higher where more support is needed and lower in other areas. The Next spring system distributes the pressure of the body on the mattress evenly, giving superior ergonomics and ensuring high-quality sleep night after night.

LFK spring system

An interconnected system consisting of cylindrical springs that ensure excellent support, great elasticity and - thanks to their compact size - ergonomically accurate reactivity wherever the body is in contact with the mattress. The springs are solid and resistant, and connected to each other by spirals running transversely through the mattress. The connection system joining the springs makes the whole mattress robust and durable.

Springs Technology

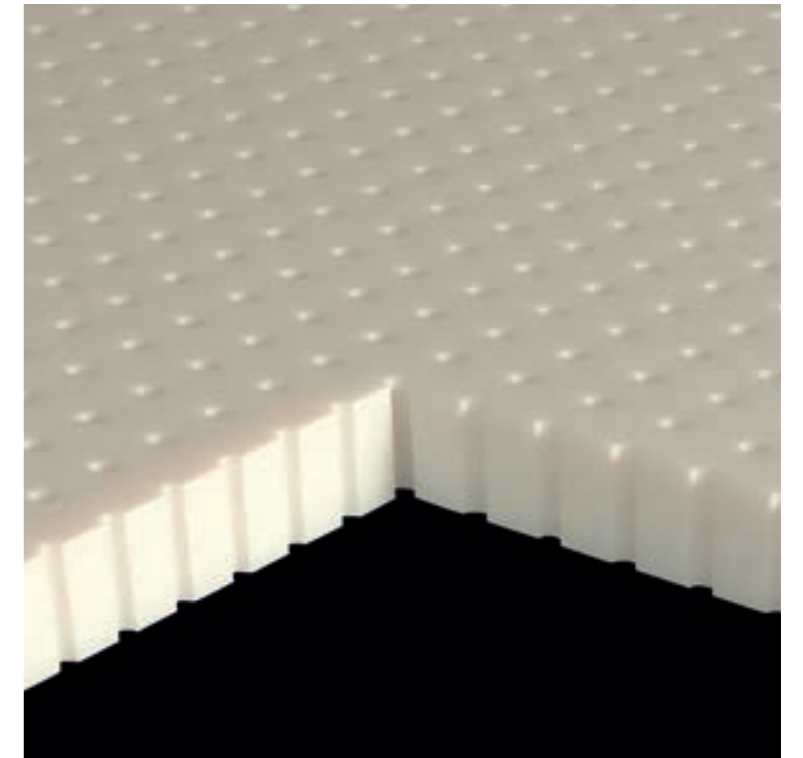

Bonnell spring system

The interconnected Bonnell springs are hourglass-shaped and undergo a special treatment to ensure excellent rigidity and long life. The springs are connected by steel spirals running transversely through the mattress. The extraordinary solidity of the system retains the elastic and ergonomic performance intact, facilitating correct sleep.

Materials

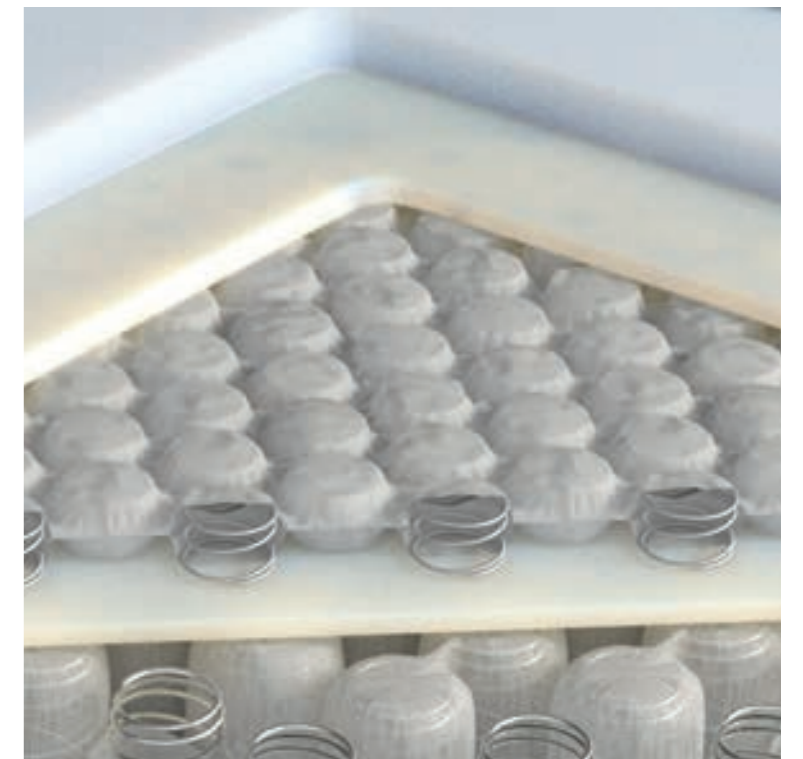

Latex

Latex is a natural elastic material, extremely balanced in terms of support and comfort. It is extremely permeable and breathable thanks to its specific structure. In fact, it is capable of rapidly disposing of moisture produced by the body during sleep. This material also has fungicide properties which help to ensure the hygiene of the mattress.

Micro springs

The micro-spring layer consists of small-sized independent springs. These offer greater comfort when placed on top of another spring system, and improve the mattress' reactivity to movements of the body.

Box System

Standard Box

The reinforced perimeter structure is ideal to allow the spring to work in a perpendicular fashion to the mattress surface.

Box with Myform Memory Air

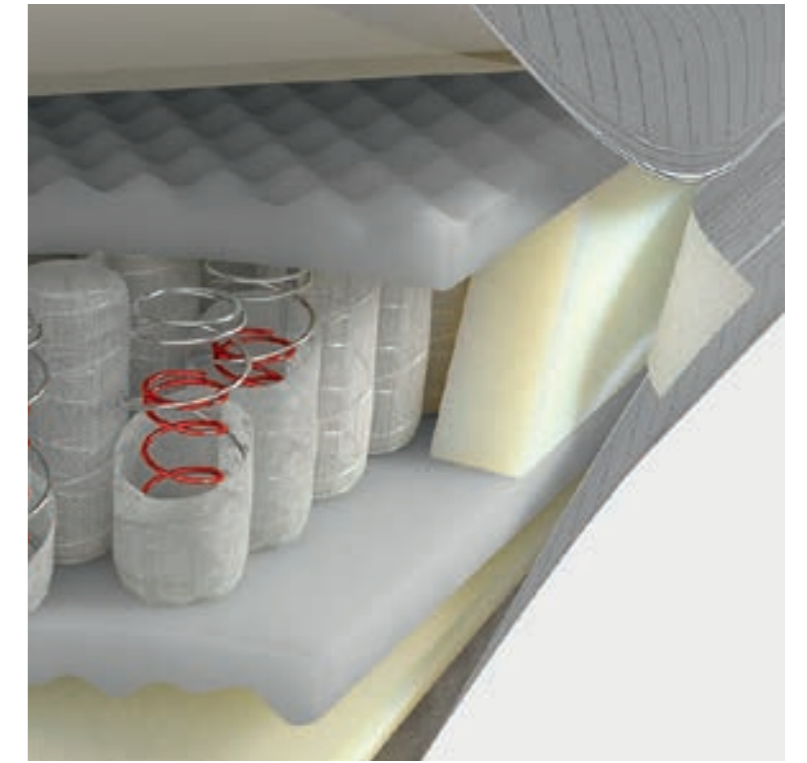

The box is topped with a layer of Myform Memory Air. This acts as reinforcement, allowing the springs to work always perpendicular to the surface; added to this is the benefit of the ergonomics and porosity of Myform Memory Air, which can dispose of moisture produced by the body during sleep.

Box with Fisiomassage

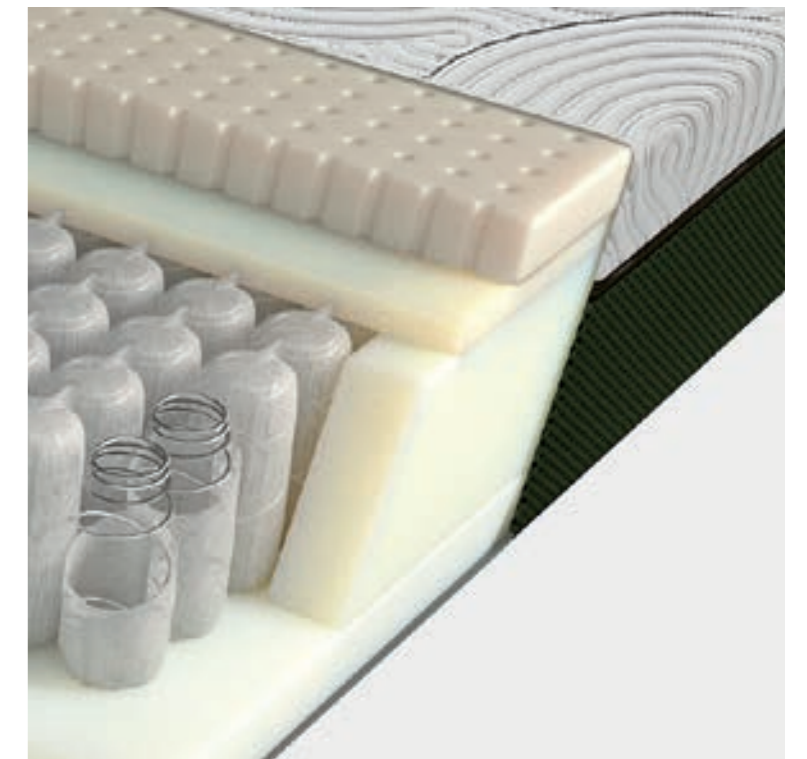

The reinforced structure is ideal to allow the springs to work in a perpendicular fashion to the mattress surface.

The special Fisiomassage contouring in different areas, which lies under and over the box, improves the circulation of air inside the mattress, increasing yield and overall comfort.

Box with Latex

The box is topped with a layer of latex. The perimeter structure retains the reinforcement action, allowing the springs to work perpendicular to the surface; added to this is the benefit of latex, a material that gives the mattress unique comfort while retaining great breathability and hygiene.

Signature Line

Signature Line

Over 50 years in the bedding sector have allowed Dorelan to gain unparalleled experience in the selection of the highest quality materials, the most practical combinations and the application of state-of-the-art technologies.

"For this product line we drew on exceptional design that evokes the classic collective memory of the mattress and a decorative style that reflects the quality of the materials used, making these products unique and recognisable worldwide."

All this is encapsulated in a premium line of enormous comfort and architectural composition. Noble fibres, technical materials and design work in synergy for an excellent result, making every product exclusive and attractive. All our know-how at the disposal of the consumer, who will realise the benefits of rest.

Epic

For true self-care, we present Epic. The first mattress with a built-in maxi topper, giving an unparalleled feeling of comfort. This is due not only to its soft, breathable cover, but also to its technical characteristics and integrated technologies.

Myform technology, Adaptive springs and micro-springs work together to guarantee maximum benefit from sleep.

Our technology for your sleep

Comfort Plus cover

Thanks to the built-in maxi topper, this cover lends unparalleled comfort. Noble fibres such as viscose are used to give the surface a special softness. The design of the quilting draws on traditional decoration, with an eye on contemporary style. Both the maxi topper and the lower section can be removed, making the cover hygienic and washable. Beautiful soft velvet covers the entire perimeter for an exceptionally elegant design.

Padding

The exquisite elegance of silk and the purity of cotton combine with the technology of Ingeo and Myform for a cool, soft padding all year round.

Tresor

Balance, elegance and softness.

The accurate support and perfect balance ensured by the hybrid composition of springs and Myform Memory Air combine with the elegant softness of the Comfort Suite cover, with its sophisticated blend of noble fibres and technical materials such as Myform.

The result is an attractive, exclusive and extremely comfortable mattress.

Our technology for your sleep

Comfort Suite cover

The only cover with a specific and exclusive pillow top system, which gives unparalleled comfort, accompanied by the softness of the viscose-based fabric. The cosy feeling is accentuated by a double layer of Myform Extension Extra Soft. The cover can be removed using a perimeter zip, which divides it into two sections for easy washing. The velvet band around the perimeter of the mattress enhances the design.

ReSearch Line

ReSearch

Dorelan developed this product line by drawing on science and technology to make high-performance products with original contemporary design. Synergy between doctors, researchers and Dorelan know-how allowed us to turn people's specific needs into products.

"For all these people, we put into practice all the available research and technology in the field of bedding, to create products that guarantee excellent performance and become an extension of the lifestyle of their users".

Dorelan ReSearch listens to the needs of people who regularly and intensively practise sport, and those who care about restorative wellbeing. We meet the needs of people who like to sleep in a natural embrace, but also those who are accustomed to a metropolitan lifestyle with cultural relevance; and the most important aspect of all: the psychological and physical wellbeing associated with development from infancy.

Re:Style

Re:Style is a sleep concept for anyone who cares about details, despite the busyness and demands of life, and seek a unique atmosphere.

"Re:Style was designed with the aim of offering a superior sleep experience, embracing the excellence that has always distinguished Dorelan. Every detail is curated with maximum attention to guarantee quality without compromise and great sleep".

Re:Style is not only synonymous with exceptional comfort; it's also a declaration of style for your bedroom. Our mattresses are made using high-quality fabrics so that you can personalise your bedroom, creating an elegant and refined ambience. This new dimension of comfort and design culminates in Hybrid technology.

Research acts visually and structurally on this concept: beautiful expert design conceals advanced technology.

Every technology has its own style

The essential and revolutionary aspect is the soothing support to release the tensions of the day and the body heat linked to a busy life. Re:Style offers inimitable comfort and unparalleled reactivity to movement.

To guarantee maximum comfort, we added a layer of independent micro-springs to the Adaptive spring system.

Re:Style cover

This viscose-based cover gives long-lasting softness. The perimeter zip allows the mattress cover to be easily removed and the fabric is quick to wash and dry, for long-lasting hygiene and performance.

U-Safe treatment

Advanced technology treatment designed to reduce the formation of bacteria and thus prevent the proliferation of mites. U-Safe is resistant to washing and guarantees protection for the entire lifespan of the mattress.

- 1 **Re:Style fabric:** Viscose and polyester microfibre.
- 2 **Myform Memory Air:** this technology is designed to offer the optimum combination of comfort and breathability. The innovative molecular structure allows Myform Memory Air to adapt very precisely to the shape of the body, adjusting the degree of support and the elastic reaction on the basis of demand, while the high porosity ensures the correct movement of air for cool sleeping.
- 3 **Standard Box:** the reinforced perimeter structure is ideal to allow the spring to work in a perpendicular fashion to the mattress surface.
- 4 **Micro springs:** the micro-spring layer consists of small-sized independent springs. These offer greater comfort when placed on top of another spring system, and improve the mattress' reactivity to movements of the body.
- 5 **Adaptive springs:** is a system with three independent types of pocketed springs with different degrees of rigidity. Adaptive springs vary in terms of the gauge of the wire, which provides different levels of support. The three types of spring are arranged in an innovative pattern inside the mattress to create areas of varying rigidity which maintain a constant reaction to the different pressure of the body on the mattress. To facilitate getting onto and off the mattress, the perimeter contains more rigid springs.
- 6 **Elastic fabric with excellent breathability:** Polyester and Elastan.

Re:Style

Pillow

The unmistakable design of the Re:Style pillow uses Myform Air to ensure maximum breathability while sleeping. Re:Style fabric makes this a high-performance product, featuring viscose and polyester microfibre on the upper section and polyester and elastane in the lower section; it is soft, elastic and washable. It undergoes the U-Safe treatment, making it washable and hygienic against bacteria and mites.

Re:Active

Re:Active is the culmination of Dorelan's excellence in mattress development: the use of the most high-performance materials offers every athlete the perfect way to maximise their recovery.

"Sleep quality is the most important factor in the recovery of an active body like that of a sportsperson, and can actually lead to improved performance".

These features are embodied in the technology of the Re:Active concept, making it an extension of training, a way of resting the body so that it recovers better and faster.

The first mattress scientifically designed to improve the rest and recovery of athletes.

The science of sleeping well

Physical movement is a key ally for wellbeing, and that's why the search for a product that could meet the needs of athletic preparation involved asking trainers and sports doctors about the characteristics needed for a healthy body.

The result was the creation of a mattress with Twin spring technology combined with a layer of Myform Memory Air, to offer relaxing support, great ergonomics and a good ability to dispose of moisture generated by the resting body.

Re:Active cover

The new Re:Active fabric is elastic, soft and breathable, thanks to its viscose-based composition. A fabric-only cover, hygienic and easy to remove and wash, thanks to the perimeter zip that divides it into two sections.

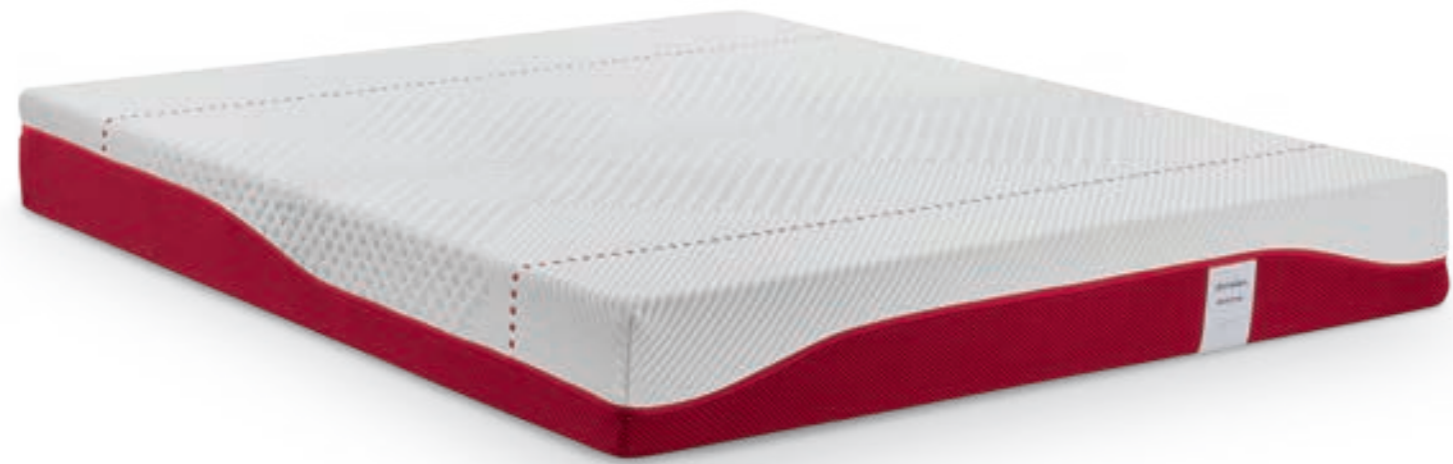

Dry-Action treatment

A state-of-the-art solution that activates the climate-adjustment function of the fabric. Thanks to the innovative application of microspheres, the treatment can regulate the temperature of the contact between body and mattress, keeping it within a suitable range.

Dry-Action treatment

Wash at 30°C

Quick drying

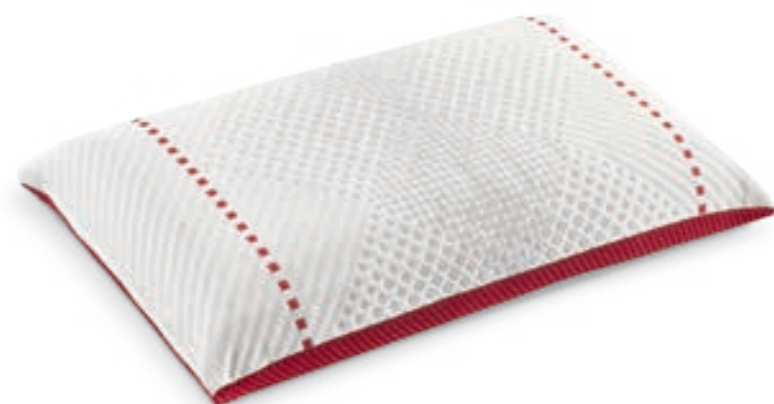

- 1 **Re:Active fabric:** Viscose and polyester microfibre
- 2 **Box with Myform Memory Air:** the box is topped with a layer of Myform Memory Air. This acts as reinforcement, allowing the springs to work always perpendicular to the surface; added to this is the benefit of the ergonomics and porosity of Myform Memory Air, which can dispose of moisture produced by the body during sleep.
- 3 **Myform Memory Air:** this technology is designed to offer the optimum combination of comfort and breathability. The innovative molecular structure allows Myform Memory Air to adapt very precisely to the shape of the body, adjusting the degree of support and the elastic reaction on the basis of demand, while the high porosity ensures the correct movement of air for cool sleeping.
- 4 **Twin Springs:** a system of independent pocket springs featuring a twin concentric coil that provides the ideal balanced support for any body type and in any sleeping position. The external spring guarantees comfort and ergonomics; the inner one gives increased support in response to greater body pressure on the mattress. The springs are distributed over seven different areas, each calibrated to adapt to the pressure of the body and offering progressive yield on the basis of the points of contact.
- 5 **Elastic fabric with excellent breathability:** Polyester and Elastan

Re:Active

Pillow

Choosing a pillow on the basis of body type and preferences is necessary in order to prevent tension and inflammation of the muscles in the cervical area. In synergy with the mattress, the pillow allows perfect alignment of the skeleton, facilitating gradual and complete relaxation. Thanks to the exclusive comfort of Myform Memory Air, the pillow guarantees breathability all night long.

Re:Life

Re:Life products allow our senses to perceive sleep as the embrace of Mother Nature. In fact, sleep becomes a vital way of approaching immortality for body and soul.

"A return to slow living, necessary to decelerate our lifestyle and find moments of introspection, when the breath aligns with the beating of the heart".

Re:Life is the feeling of a holiday devoted to wellbeing and rest, but as part of daily life.

The cultural and scientific heritage of Dorelan aims to go beyond ordinary comfort for personalised and unequalled sleep.

The embrace of Mother Nature

For Re:Life, Dorelan's research focused on an important natural material - latex - which allows the body to feel embraced and radically increases comfort and sleep quality, while shortening the time it takes to fall asleep. To support this layer we added a truly cutting-edge spring system; the Adaptive spring guarantees correct support for every area of the body, and also the comfort we immediately notice when we're completely relaxed.

Long life cover between nature and research

The delicate neutral shades and the design of Re:Life fabric evoke its inspiration: the natural world around us, which is once again part of our lifestyle, even while we sleep. The softness is due to the cotton component, which makes this fabric cool.

U-Safe treatment

Advanced technology treatment designed to reduce the formation of bacteria and thus prevent the proliferation of mites. U-Safe is resistant to washing and guarantees protection for the entire lifespan of the mattress.

1 Re:Life fabric: Cotton and polyester microfibre.

2 Box with Latex: the box is topped with a layer of latex. The perimeter structure retains the reinforcement action, allowing the springs to work perpendicular to the surface; added to this is the benefit of latex, a material that gives the mattress unique comfort while retaining great breathability and hygiene.

3 Latex: is a natural elastic material, extremely balanced in terms of support and comfort. It is extremely permeable and breathable thanks to its specific structure. In fact, it is capable of rapidly disposing of moisture produced by the body during sleep. This material also has fungicide properties which help to ensure the hygiene of the mattress.

4 Adaptive springs: is a system with three independent types of pocketed springs with different degrees of rigidity. Adaptive springs vary in terms of the gauge of the wire, which provides different levels of support. The three types of spring are arranged in an innovative pattern inside the mattress to create areas of varying rigidity which maintain a constant reaction to the different pressure of the body on the mattress. To facilitate getting onto and off the mattress, the perimeter contains more rigid springs.

5 Elastic fabric with excellent breathability: Polyester and Elastan.

Re:Life

Re:Generation

Dorelan has also highlighted the benefits of sleep on cellular renewal, which is associated with healthy habits, above all correct sleep culture. To this end we analysed the flexible and dynamic habits and lifestyles of individuals, and came up with the concept of Re:Generation and its complementary accessories, which facilitate a sleep quality that can restore physical and mental equilibrium, altered by the ups and downs of daily life.

"Years of research into sleep confirm that a quality mattress is an essential part of cognitive-behavioural therapy, helping to reduce levels of stress and anxiety and thus improving people's lives".

All-round wellbeing becomes a new scientific formula for anyone who likes to look after themselves.

A holistic experience of rest, sleep and wellbeing, encapsulated in a single concept: regeneration.

Meditation becomes technology

Dorelan studied weight distribution and movements during sleep, the quality and elasticity of materials, comfort, aspects that regulate the body-mattress microclimate and, obviously, ergonomics, to give the sleeping body a deep-down feeling of renewal, just like meditation.

The scientific result that came closest to this was Myform Regen: science, technology and experience really can make a huge contribution to our health.

Re:Generation cover

Made of viscose and polyester microfibre, Re:Generation fabric is designed to offer great softness and naturally follow the contours of the body. Its particular structure, which alternates between different volumes, give the mattress an exclusive feeling of comfort and ease.

Soft-Night treatment

The fabric undergoes the Soft-Night treatment, which smooths and softens the fabric and remains even after washing. In addition, it inhibits the proliferation of mites and bacteria.

Re:Evolution

Dorelan invests substantially in people, particularly parents, who know they need to educate their children in the culture of sleep. Because sleep is essential at every stage of childhood.

"Our research starts on the inside, with an interview with every parent and habits associated with sleep routine. We know these are fundamental for the correct energy, but our research focuses above all on children's development, first of the brain and then the body, because during the day they are subject to positions and behaviours that need rebalancing at night".

Re:Evolution is the choice of parents who realise the importance of sleep culture, and who educate their children, as we do with bedtime stories, leaving them free to grow - always supported, but capable and independent in their own decisions.

dorelan
18.000 €

The informed choice to transmit sleep culture to their children from the outset.

A mattress that can adapt to the relation between weight and height, and which can accompany the child throughout their development.

The spirit of childhood

The Myform technology used in this mattress is related to the body of the person who sleeps on it, because a child's body is lighter than an adult's, and also has different needs depending on the stage of development. This mattress can adapt to all these changes.

The layers of Myform that make up the mattress are specially selected to maintain comfort, ergonomics and functionality.

A bedtime story every night

The design of Re:Evolution contributes to good sleep habits; it is therefore exclusively dedicated to children, not only for its properties, but also for Nicoletta Costa's illustrations, which will accompany the child on fantasy journeys to splendid, serene worlds, and leave beautiful memories of nighttime.

Surface Protection treatment

The properties of this treatment protect the fabric from stains and guarantee maximum softness and breathability. The treatment is resistant and therefore suitable for fabrics that are washed frequently.

Re:Evolution

Nicoletta Costa

We asked Nicoletta Costa to illustrate the surface of our Re:Evolution fabric for children, so her bedtime stories are always with them as they grow.

Nicoletta Costa has been illustrating children's books since 1980, with more than 600 publications delighting young readers all over the world and creating characters that have entered the collective imagination and become part of childhood for generations.

Although her degree is in architecture, Nicoletta has always followed her heart's burning passion, writing and illustrating children's books.

Many of her characters have become TV stars in series broadcasted on leading children's channels.

For Dorelan, Nicoletta created figures from the world of sleep: the star that lights children's nights, clouds for calm dreams, the sun who goes to bed and teaches good habits, and of course the little bird who reads the bedtime story.

Innovative Line

Innovative Line

This line includes a number of products that have been part of the Dorelan tradition for years.

"For many years our mattresses have been valued by people who choose quality in their lives, and seek products with the very best technology. And thus we ride the wave of innovation, so as not to disappoint our customers".

The mattresses in this line belong to our family advanced technology products, which are constantly upgraded for structural improvement. The goal is to ensure their quality always keeps pace with technological innovation, without neglecting the attention to detail, both classic and modern, which is always elegant and has made Dorelan stand out for over 50 years.

Levant

Levant is the beautiful that becomes functional. The elegant microfibre side band gives greater compactness at the edge of the mattress, integrating perfectly with the style and softness of the cotton fabric and the advanced design of the padding.

Elegance cover

Elegance and comfort come together in a technically advanced cover whose generously padded surfaces are edged with the exclusive side band system, solid and resistant.

Padding

The technology and freshness of soft Myform Memory Clima on one side combine with the freshness of cotton and the resistance of Ingeo on the other.

Fabric

The purity of organic cotton, grown without pesticides, combines with the softness of viscose and the elasticity of cool, soft polyester microfibre.

Fibersan treatment

This natural treatment with lavender and eucalyptus inhibits the proliferation of mites and preserves the hygiene of the cover.

- 1 **Fabric:** Viscose and polyester microfibre.
- 2 **Padding:** Bamboo fibre and polyester microfibre.
- 3 **Myform Extension Extra Soft:** a variant of Myform Extension designed for use in coverings. Elastic and breathable, it guarantees long-lasting softness and protects the performance of fillings, even after washing.
- 4 **Fabric:** 100% high-resistance cotton.
- 5 **Myform Memory Clima:** the material stabilises the temperature of the body in contact with the mattress. It ensures constant heat regulation, retaining or releasing heat when needed.
- 6 **Myform Memory Air:** this technology is designed to offer the optimum combination of comfort and breathability. The innovative molecular structure allows Myform Memory Air to adapt very precisely to the shape of the body, adjusting the degree of support and the elastic reaction on the basis of demand, while the high porosity ensures the correct movement of air for cool sleeping.
- 7 **Myform Extension:** thanks to its capacity for support, this material offers maximum elasticity in a balanced way, and ensures easy movement in sleep, resulting in excellent lasting comfort. Furthermore, the material is ergonomically stable in terms of external temperature.
- 8 **Myform Air:** is designed for use in warmer seasons or for those who need extra breathability during sleep. The large number of channels created within Myform Air ensure the passage of air in any situation, and maintain the highest level of hygiene.

Essential Line

Essential Line

Everything starts here, with simplicity that does not compromise on quality, and the experience of people who have been making mattresses for almost 60 years and sleeping on them for the same time. From the outset, Dorelan has chosen and manufactured state-of-the-art products which have been fine-tuned over the years thanks to extensive scientific research.

"Today as in the past, Dorelan pursues its credo, and aims to get everyone - absolutely everyone - sleeping well".

Today these products, and the superb quality that has always distinguished them and made them timeless despite their simplicity, are a democratic line accessible to all, so that the culture of good sleep can come to every family.

Format

Prime cover

The breathability and perfect hygiene ensured by the micro-perforated side band are combined with the solidity of the traditional cover, removable with a perimeter zip, which divides the cover in two for easy washing.

Padding

Hygienic, breathable and resistant, thanks to polyester microfibre on both sides.

Fabric

Hygienic, breathable and comfortable, thanks to the softness of viscose, and highly resistant to washing due to elasticity of polyester microfibre.

Re:Generation

Designed to cater for different types of sleep, the Re:Generation pillow takes advantage of the excellent characteristics of Myform Regen, an innovative material whose special molecular structure allows it to adapt to the shape of the neck, evening out support and eliminating the pressure normally exerted by the pillow and allowing correct alignment of the spine and perfect relaxation of the neck muscles. Made of Re:Generation fabric, it is soft to the touch and undergoes Soft-Night treatment, which adds even more softness, even after washing.

Available sizes:
40x70 cm.

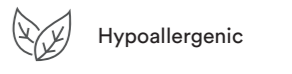

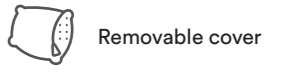

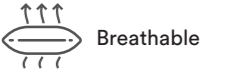

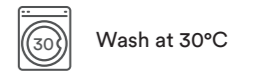

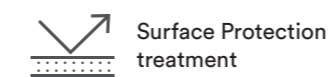

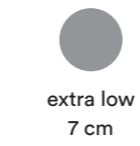

Re:Evolution

Designed specifically to aid children's sleep, this Myform Air pillow is lower to offer maximum comfort for the neck even in small children with special needs for growth.

The fabric is treated with Surface Protection, which protects it from stains and guarantees softness and breathability. The treatment is resistant and therefore suitable for fabrics that are washed frequently.

Available sizes:
40x70 cm.

Mattress and pillow protectors

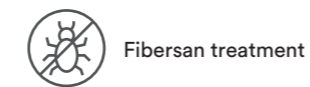

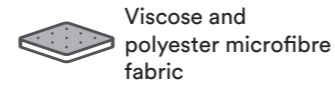

Fibersan

The Fibersan mattress protector and pillowcase are made in soft viscose and polyester microfibre which undergo a natural treatment with lavender and eucalyptus, making them non-allergenic and anti-mite.

The mattress protector features an elasticated perimeter which allows easy and stable positioning on the mattress, while the pillowcase has zip closure.

Low version recommended for mattresses with height from 20 to 25 cm, High version for mattresses with height from 26 to 31 cm, Extra High version for mattresses with height from 32 to 37 cm.

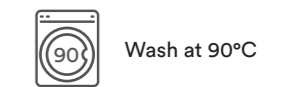

Regard

The Regard mattress protector and pillowcase are designed to offer maximum protection for mattress and pillow. The soft Tencel fabric is waterproofed by means of a special process which preserves softness and breathability while ensuring comfortable sleep.

The mattress protector features an elasticated perimeter which allows easy and stable positioning on the mattress, while the pillowcase has zip closure.

For mattresses with height max 31 cm

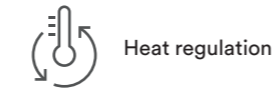

Cool

The Cool mattress protector and pillowcase are made in Tencel, a soft cellulose-based natural fabric, treated with Outlast®, which uses PCM (Phase Change Material) technology to regulate the contact temperature between body and mattress, ensuring cool and dry sleep at any time of year.

The mattress protector features an elasticated perimeter which allows easy and stable positioning on the mattress, while the pillowcase has zip closure.

For mattresses with height max 31 cm

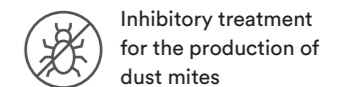

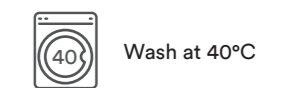

Mite

The Mite mattress protector and pillowcase offer exceptional protection for anyone with an allergy to mites. Made of elasticated polyester microfibre, they undergo a treatment that prevents the proliferation of mites, preserving the hygiene and breathability of the bed and bedding.

The mattress protector features an elasticated perimeter which allows easy and stable positioning on the mattress, while the pillowcase has zip closure.

For mattresses with height max 31 cm

Mattress and pillow protectors

Emme

The Emme mattress protector and pillowcase are made in 100% sanforised cotton, making them cool, breathable and extremely resistant to washing. The mattress protector features elastic corner tapes which allow easy and stable positioning on the mattress, while the pillowcase has zip closure.

Low version recommended for mattresses with height from 20 to 25 cm, High version for mattresses with height from 26 to 31 cm.

100% cotton fabric

Wash at 60°C

Breathable

Absorbent

Natural

Seal

The mattress protector and pillowcase are made in a double layer of Tencel, waterproofed by means of a special process. The result is two soft, cool products with excellent breathability and hygroscopic capacity, which can protect the mattress and pillow from any external element, and can be machine washed at very high temperatures, up to 90°C.

For mattresses with height max 31 cm

Tencel® and polyurethane/polyester

Wash at 90°C
