

BLACK OAK LED

Extreme Brightness

Brightness is probably the biggest factor of what makes a great LED light bar. We use quality Osram and CREE LEDs to give you the highest performance possible.

Durable

The environment can be extremely harsh on your LED light bar. We offer a lifetime limited warranty on all of our lights because we have faith in our products. To better demonstrate raw durability and strength, we parked our JK for 2 hours on a D-Series 20".

Waterproof

Marine, snow, and torrential rains can be Brutal! To illustrate how well our lights hold up we submerged a D-Series 20" LED underwater for 12 hours. With its military grade breather and IP69K rating, you will have no issues with salt corrosion, humidity, or moisture.

Headlights

Black Oak LEDs

This photo was taken using the stock headlights on our JK.

Our LED's shoot light ridiculously far, granting precision and high intensity with the flick of a switch.

High-Quality LEDs

Black Oak uses the highest quality LEDs on the market. With the choice of 5w Osram or 10w CREE, brightness and performance will never be a problem.

Military Grade Breather

With its IP69K sealed housing the Black Oak D-Series and PODs are completely protected from reaching its valuable electronic components.

Lexan Protection Technology

Known for their outstanding mechanical, optical, electrical, and thermal qualities, Lexan allows a clear, virtually unbreakable, polycarbonate to protect against high impacts.

Customizable Beam Pattern

Choice of combo, spot, or flood allowing you to completely meet your needs.

IP69K Waterproof Housing

Our US MIL810-STD breather protects you from water, freezing, dust, humidity, temperature, salt corrosion, and over 30 other variables.
