Lte

*3 Camera System
with up-to 5 Cameras

*Optional 7' or 10' LCD Monitor

In order to provide real time viewing and monitoring, our MNVR system must be connected to the internet while driving. There are 3 options that can allow this system to be connect to the internet:

1. *WIFI – If you already have a *WIFI internet hotspot available in your vehicle, this system can be connected to this *WIFI source.

2. 4G SIM Card – This system offers a 4G Sim Card slot, which means you can insert a 4G Sim card from AT&T or T-Mobile. SIM Card must have an active data plan from ATT or T-Mobile. Once SIM card is inserted to the MVNR sim card slot, you can connect to the internet to enable live remote viewing access. We recommend an unlimited data plan for your SIM Card. You can provide you own SIM card or you can purchase the SIM card and service from us, details are below:

4G GSM DETAILS

*WIFI – Must be used with USB Tool to be inserted in front USB port for WIFI function to be enabled.

Unlimited Plans

All you pay is one price regardless of how much data you use. Our plan offers higher data speeds during your usage allotment period.

Our data plans can display cameras up to 1080p HD quality on demand.

Customers can switch plans at any time to higher or lower tiered allotment data plan and pay the difference or prorated difference for the new plan cost.

Estimated Download and Upload Speeds are based on the service plan that is selected.

After you use your plans allotment of high-speed Internet data you may be subject to slower speeds, speed reduction will occur until your next data reset cycle date.

Depending on the plan chosen will determine when the restricted data may occur. Video streaming quality may be slightly affected during service slower down periods.

What is the difference between our unlimited plan and other providers selling unlimited plans?

We get this question all the time, here it is, we have complete control of the speed and the amount of data you can use. Other providers are selling you faith based cellular plans that offer 22GB of high-speed data and then can go slower after congestion. The reason that it does not go slow down quicker on our data service is that we keep the tower open which allows monitored congestion of the service to go on for a bit longer before being throttled down.
