

Weatherproof Rechargeable Battery Important Information

PLEASE NOTE charger must be connected to a 110 outlet to properly charge the battery. Once you receive your new battery it is highly recommended to turn on the back of the battery to the “IN” position the battery is now ‘ON” (if the button is “OUT” the battery is in the off position), connect to either a camera or monitor. To confirm discharge there should be no led status indicator light on.

Once battery has discharged, follow these instructions:

1. Connect a fully discharged battery (one that has no colored led status indicator) to a battery charger that is connected to a 110 outlet. We recommend not using the included CLA Cord.
2. The battery led status indicator should immediately turn blue at this point.
3. Push the power switch in so that the battery is in the on position. Once this is done the LED should turn red (the unit is now charging). From red it should turn green and from green the led status indicator should turn blue to indicate it is fully charged. This process takes about 3 hours or less to complete.
4. After the battery has charged for 3 hours or less the led status indicator should turn from green to blue indicating it is fully charged. If the battery does not turn blue but only turns green the device may not have a complete charge or there may be charging malfunction. If you encounter this problem, repeat steps 1 through 3 and call for assistance if necessary.
5. Finally when you connect the fully charged battery to your device the led status indicator will normally be blue for a short time but may also be green. In either case the battery should be able to provide power to a device for about 9- 10 hours.

Important Note: This battery, just like every battery in the world will lose power over time. Each month, you will have less and less time of use, this is normal and happens with every battery made. Do not expect the same length of use 6 months from now as you will have brand new. If you need to have 10+ hours use time, you will need to buy a new battery in the future. Contact the manufacturer or supplier with further questions.
