

## How to download the footage on USB flash drive

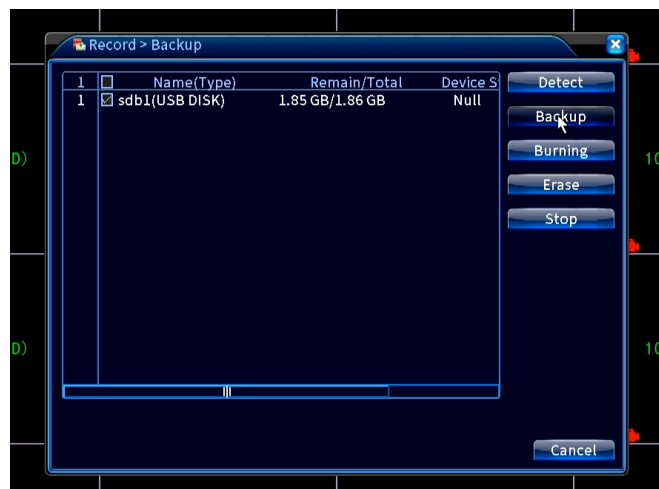

1. Connect USB flash drive to USB port of the DVR.
2. Access Main Menu (right click with mouse on home screen, choose main menu)

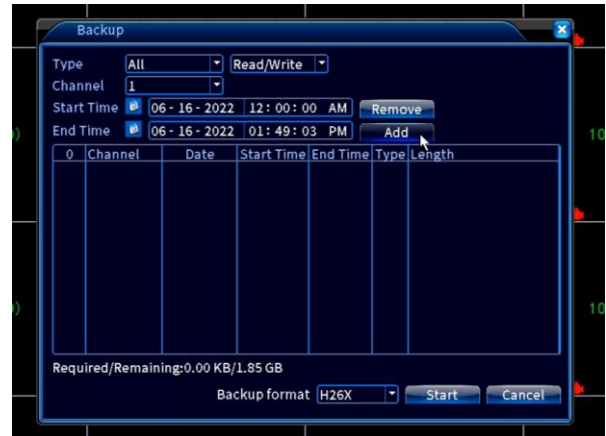

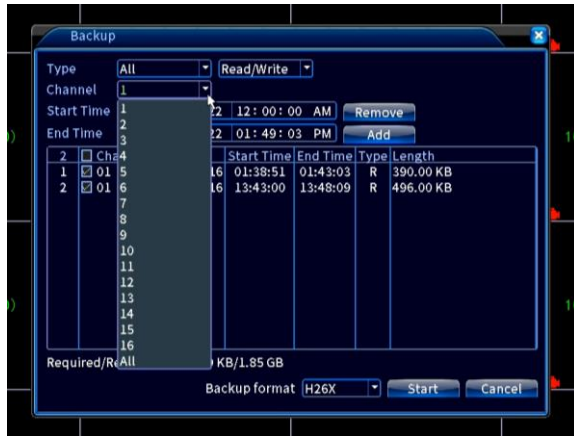

3. Choose "Record", then Click on "Backup" as shown on below screenshots:

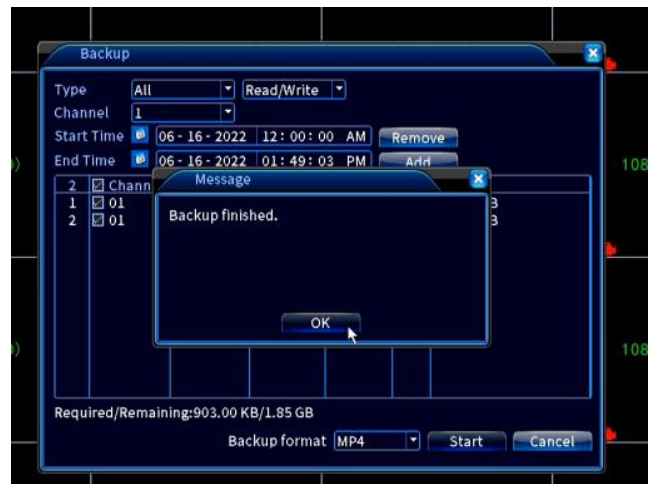

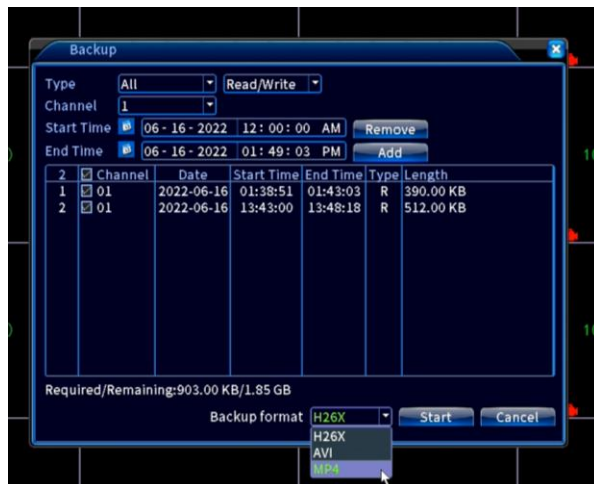

4. If you have connected USB flash drive, it should appear in "Backup". In case it doesn't show, please click "detect". Choose USB Disk and Click Backup:

5. In Backup window, choose “Channel”, “Start time” and “end time”. Click “Add”. You are able to add more than one footage in this list. Once you add all the footage you need, please select them all.

6. Choose Backup format: H26X, AVI or MP4. We recommend to choose MP4 and click “Start”, the process may take few minutes depending on video footage capacity, once it’s completed, the message “Backup Finished” will pop up on the screen.

7. You can playback the downloaded MP4 video with VLC player or Windows Media Player. You might need to download extra codecs for Media Player.
