WARNING

- Any piece of equipment can be dangerous if not used properly.
- You are responsible for the safe operation of this device.
- The user must carefully read and follow any warnings, safety signs, and instructions provided with the kindling splitter.
- If the structural integrity is compromised do not continue to use this device.
- Be aware of any pinch points such as between the log and steel splitting wedge, safety ring and log, and even sled hammer and log.
- BiggerFire is not liable in any way for injury caused when using this device, use at your own risk.
- Remember to always comply with occupational health and safety laws when using this device.

INSTRUCTION

- Please note that this is a kindling splitter NOT a large log splitter. The intended use is to efficiently create kindling wood in order to start a fire.
Pieces of wood should not exceed 9.5 inches in diameter for optimal use. Larger pieces may wedge inside the splitter.
- Always wear proper eye and hand protection before using this kindling splitter.
- Optional BUT recommend step for safe use. Anchor kindling splitter to level sturdy surface using two mounting holes on the base. Be sure the splitter is firmly secured before using it.
- Place the log within the safety ring and center it on the splitting wedge.
- Carefully strike the log with included 3.78 lbs sledge hammer. Continue to strike until the log is driven down far enough to split.
- Repeat steps 4 and 5 with a piece of wood until the desired kindling size is reached.
- Enjoy perfectly split kindling for any fire applications.
- **Tips: If possible, please use these two self-tapping screws to secure the product to the stake when using the product!**

self-tapping screw:
M6*40mm*2pcs
