

G4 Adapter Instructions

The first thing you will have to do with your adapter is peel off the protective paper coating that is on both sides of the adapter. It is easiest to peel starting at the guide line cut into the side of the adapter.

The G4 adapter is very easy to install. All you have to do is place the adapter as shown in the below sample image, paying close attention to the orientation of the vehicle and that the guide line on the adapter is pointing in the correct direction, and then just push the adapter down into position until it fits firmly.

It is very important to make sure that the guide line is facing the correct side, as the sockets are slightly tapered and will not fit stand arms properly if inserted through the wrong side.

Below is a guide as to which socket fits which stand arms the best.
