

ID LOCK 1000

Description

ID LOCK 1000 is an electronic locking system for the uncomplicated locking of cabinets and safe-deposit boxes. It is important to us that your sensitive data and valuables are secure against unauthorized third parties. Thanks to its unobtrusive design and robust feel, the lock can be easily installed in various materials. Thus, the ID LOCK 1000 can be installed in wooden cabinet doors as well as in steel furniture. Due to its ergonomic and qualitatively flawless design, it is one of the most practical locking systems on the market.

Multiuser mode

This mode is particularly suitable for constantly changing users, who use the locker only temporarily or once.

The transponder is therefore only valid for a single locking process and is automatically deleted by the locker when it is opened.

Private mode

In this mode, the lock is permanently assigned to a single user. This user is now permanently authorized to operate the lock.

Battery warning

The device indicates the falling battery voltage by lighting up a red LED signal light. It is recommended to change the battery as soon as the lock indicates a low level.

If the battery level has reached the critical range, the ID LOCK 1000 can no longer be operated.

▶ APPLICATIONS

- Gyms
- Swimming pools
- Office buildings
- Schools

▶ FEATURES

- Flexible locking options (1,2 or 3-point locking)
- 2 installation variants (Retro-Fit + Flush-Fit)

ORDER CODE

Description	Order code
ID LOCK 1000	R-EA-EEL-1000-HF

Retro-Fit

The Retro-Fit installation allows easy and almost tool-free replacement of the existing locks. Fast and cost-effective

Flush-Fit

The ID LOCK 1000 can be recessed into a furniture front and screwed in place with the ID LOCK 1000-Ring. The lock stands out discreetly from the front.

Battery Drawer

The batteries can be changed from the outside in both installation situations without having to unlock the lock.
