 Histology wax
Embedding quality in histology

www.trajanscimed.com
Trajan histology wax can assist pathologists in making accurate diagnoses and determine an effective line of treatment for their patients.

Trajan histology wax consists of purified paraffin wax based formulations which are manufactured using high quality raw materials under a stringent quality management system. The superior product performance is evidenced by delivering reproducible results with complete tissue infiltration and embedding for precise specimen sectioning at the microtome station.

Trajan histology wax Plus

Highly purified paraffin wax as the base ingredient, supplemented with plasticizing polymers to provide elasticity and tensile strength to specimen sections. This allows superior sectioning with minimal tissue block shrinkage. Hence, embedded specimens can be easily cut with steady ribbon continuity.

The wax is suitable for all general embedding and sectioning purposes.

- Available in cartons of 8 x 1 kg bags.
- Melting point range: 54 – 57°C.
Histology wax
Embedding quality in histology

Trajan histology wax consists of refined mixtures of highly purified paraffin containing proprietary supplements. The wax significantly minimizes tissue compression due to sectioning and provides sufficient elasticity to produce clear and wrinkle-free sections.
