**Intended use**
The Davidson Marking System® tissue marking dyes are permanent tissue markers for use on surgically removed tissue specimens.

**Product**
- Tissue Marking Dyes.
- Provided in either 2 oz (59 mL), or 8 oz (237 mL) bottles in eight colors.

**Precautions**
- Dye should only be applied to excised tissue, never directly on patient.
- Always shake the bottle well before each use.
- Pour out a small amount of dye for immediate use, then tightly close the bottle.

**Storage instructions**
- Store the product in original packaging, in a dry environment, preferably protected from direct sources of heat and light.
- Store at room temperature – recommended storage temperature between 5°C and 32°C.
- Avoid large variations in temperature conditions during storage.
- Dyes do not have a specific shelf life, however they will dry out in the bottle if left uncapped.
  If your lab requires an expiration date, we recommend using one year from date of receipt.
- If suboptimal performance is noticed with no apparent reason and cannot be attributed to variations in laboratory procedures, please contact your regional Trajan representative.

**Usage**
- Shake the bottle well before and throughout each use.
- Carefully blot tissue to remove excess moisture.
- Apply dye directly to desired portion of tissue using an applicator stick or brush.
- Do not apply excess dye as this will prolong drying time.
- Recap bottle promptly to prevent evaporation.
- Allow dye to dry completely (1-2 minutes). Once dry, the dye is permanently bonded to the tissue.
- No mordant is necessary, but if desired, acetic acid is appropriate and effective.
- Once dry, the processing of the tissue can be performed.

**Compatible instruments**
The Davidson Marking System® tissue marking dyes are compatible with most automated tissue processors used in a histology lab.

**Product conformity**
CE 000577

**Compliance certification**
![CE IVD]({})

**Technical data**
