Microsampling | hemaPEN®

**Intended use**
hemaPEN® is intended for the collection of fixed micro-volume blood and storage in a dried format (dried blood spot (DBS)).

**Product**
The hemaPEN is a robust handheld device supplied as a non-sterile, single-use unit, designed to collect from a single source, four accurate and precise fixed micro-volume of blood, and transfer to four 3.5 mm paper discs (substrate). Samples are contained within the hemaPEN’s tamper-resistant housing, the integrated desiccant enables a consistent sample drying profile, and the dried sample format enables simplified storage and logistics. The entire collected sample goes directly into analytical workflow effectively eliminating the volumetric aspect of hematocrit bias inherent with conventional DBS cards.

**Precautions**
- Follow instructions for use.
- For use by research personnel and healthcare professionals.
- Single use only – do not reuse.
- Contains glass capillaries. Do not use if the capillaries are broken.
- Use the hemaPEN device within 30 minutes once removed from the packaging.
- hemaPEN performance may be impaired when collecting blood with hematocrit >55%.

**Storage instructions**
- Store the devices in original packaging at room temperature, in a dry area.
- Avoid direct sunlight exposure.
- After use, store the hemaPEN device sealed in original packaging. Store or transport product at room temperature.

**Compliance certification**
Trajan manufactures hemapen under a Quality Management System aligned to ISO13485 and independently certified to ISO9001 with expanded scope covering non-active Medical Devices.

**Technical data**
